Report highlights 'tragic nature' of Europe's IT record

Is Europe going down the drain?

by John Riley
A HARD-HITTING report by two top economists to the European Parliament recently lashed out at the "tragic nature of Europe's poor performance in the field of information technology".

Both Albert and Ball agree that Europe has to get its act together by encouraging high technology industries, ensuring European wide technical standards, and broad R & D programmes, as well as proposing a series of monetarist aims.

The European Parliament is likely to debate the report in September, and the document could influence future policy. Socialist Euro-MP Barry Seal has reservations: "It is an interesting academic exercise but probably won't be too effective as European countries now are working together less closely than in the past."

electronics 1982 trade balance, Albert calls for an increase in the community R & D budget to about \$20,000 million by 1993. He believes the current R & D programmes are inadequate: "The Esprit programme although a useful step in the right direction, is 'admirably small', he said, 'and if R & D continues to be organised at a national level it will become less and less competitive.' Ball hit out at European com-

Five want new PBX standard

by John Riley
FIVE top PBX and computer companies are to adopt a new interface standard to link computers and PBXs announced last week in the US by its developers Northern Telecom and Digital Equipment.

Computer manufacturers Data General and Hewlett-Packard and digital PBX makers Ralm, Mitel and Intecom have announced their commitment to develop the interfaces worked out by Northern Telecom and DEC.

The standard, called cPI (computer to PBX interface), is based on the North American T-1 carrier standard originally developed by

Apple blocks Taiwan move

by George Black
APPLE has blocked an application for details of one of its micro operating systems to be revealed to a Taiwanese manufacturer.

The application was made by Sirel (UK), British importer and distributor of the Micro Professor machine, made in Taiwan by Multitech. Apple is bringing a copyright infringement action seeking damages from Sirel.

For Sirel, Shipley told the High Court that it had found itself in "an extremely odious position" in the middle of the dispute. It had realised that the Micro Professor was compatible with the

IBM sales policy pays dividends

by John Kavanagh
IBM'S emphasis on sales rather than rentals continues to pay dividends. The industry leader's half-year results show an 18% increase in business to almost \$17,880 million and 24% growth in net profit to \$2,319 million.

That recovery included a 30% increase in sales business and a mere 2.6% growth in rentals. That trend is even more marked this year. At the half-year stage the company's sales income has risen by 47%, while rental business has fallen by 13%.

ICT dispels doubts about its desk-top

by Philip Hunter
ICT ON Monday demonstrated its long-promised offering in desk-top communications and removed lingering doubts about the product's existence. But it may not be able to produce and sell it.

ICT is desperately short of cash and, unless money can be raised quickly for promotion, the product, called Triemco 2000, could suffer an early death. The company will find it difficult to raise money from shareholders after a bitter dispute over share pricing on the Luxembourg stock exchange.

Former Calma man goes on US blacklist

by Kevin Cahill
CALMA, the CAD/CAM subsidiary of US electronic giant General Electric is facing a major US customs investigation as ex-Calma France sales manager Felix Popovitch is placed on the US exports denial list.

Popovitch's appearance on the list, which effectively bans him from any involvement with American technology was overlooked by Calma France and only came to light when Popovitch accepted a job with another American company Daisy Systems four weeks ago.

Within days of Popovitch's papers turning up at the Daisy offices in California staff there spotted his name on the list and he was advised that he could not join the company.

Popovitch then told Calma France that his resignation was a mistake, but Calma France had by then heard of the denial order and refused to rescind his resignation. Popovitch appeared on the denial list under his own address and alongside the names of private companies through which the US customs officials allege that Popovitch was shipping highly sensitive microelectronic technology to Eastern Europe.

At Calma France Popovitch was the sales manager for microelectronics in Southern Europe.

His job took him all over the continent and US customs officials are concerned that he may have arranged for Calma microelectronics technology and information to reach Eastern Europe through Switzerland and Italy, having first laundered the products through dummy front companies.

OAKLEY... Named team.

Alvey projects may begin by autumn as firms unite

by John Kavanagh
UK FIRMS are queuing up to take part in the government's Alvey Programme for research into the next generation of computing - and showing a new willingness to work together.

And several Alvey projects could be under way by mid-September even though programme director Brian Oakley only named most of his team last week and they do not start work until August.

But computing and electronics firms still doubt whether the 50% government funding is enough to tempt them into those areas of research with little immediate pay-back.

Three of the full-time directors are from GEC, ICL and Logica. They are on secondment for two years initially - and are being paid by their firms.

ICL goes big in US

ICL BROKE into the North American mass market on Tuesday with a multi-million dollar a year deal with the world's largest micro retailer, Computerland.

The US-based 450 plus chain of franchise micro shops is to sell ICL's DRS 20 series of distributed micro for recommended sale in all of its shops worldwide, with special emphasis on more than 350 in the US.

Mercury goes international

INFORMATION technology minister Kenneth Baker announced that Mercury will be allowed to provide international services in competition with British Telecom. And BT at once protested at the lifting of restrictions on its private rival. So far Mercury has been forced to lease lines and operate through BT, limiting its international services.

Shares are unsold

CITY investors have failed to take up shares in Technology for Business, formerly the UK arm of troubled French peripherals maker Logabax, leaving 66% of the stock unsold.

Warner's loss
LOSSES on micros and video games have given Warner Communications a \$283 million deficit in its second quarter, compared with a \$68 million profit last year. The European arm of the computing subsidiary Atari was profitable; the problems were all in the US, where Atari lost \$310 million.

WINCHESTER MICRO FOR £3395

HOW SOON CAN YOU GET YOUR HANDS ON IT?

Come to our Open Day on Wednesday, 10th August, 10am to 5pm and put the new Cifer Club through its paces.

by GEORGE BLACK... Big claim for the software.

Data General merges the mini and the micro

by George Black
Data General last week launched a dual processor machine at the bottom of its range which it says will end the distinction between the mini and micro.

The Desktop Generation will incorporate both Data General's own micro Eclipse chip - claimed to be comparable in power to Motorola's 68000 - and the Intel 8086 on which IBM's successful personal computer is based.

The announcement marks Data General's re-entry into the small computer market after its miscalculated Enterprise project. The Enterprise, built on the 16-bit Nova chip, was initially overpriced and lacked software support.

Savage but belated price-cutting failed to shift the boxes off the shelves. This time Data General

has acknowledged the first commandment of computer law, that purchasing decisions are software-driven, by making its micro CPM and MS-DOS compatible.

The microEclipse chip, which handles all I/O functions, is said to enhance the 8086, making it appear to run faster than other micros. The combination supports five operating systems.

Introducing the machine, president Ed de Castro said that no manufacturer has yet offered desktop micros integrated into the world of minis, superminis and mainframes.

"This will bring the strongest array of software available on any desktop," he said.

The family of three - models 10, 20 and 30 - undercuts IBM by a small margin, with an entry

level of £2,500. It is the Model 10 which features the dual-chip system, the other two being Eclipse-dedicated.

Vice-president Robert Miller said Data General believed the dual-chip hardware was a unique invention which it would be seeking to patent.

Model 10, by supporting both Microsoft's MS-DOS and Digital Research's CP/M-86 operating systems, gives users access to the vast libraries of IBM-compatible applications programs now being turned out by independent software authors.

"They also have access to Data General's own mini software systems MP/AOS, RDS and AOS, which Data General claims are more popular among users than the acclaimed Unix.

The system can support users at once, so that one is running a Peachtree package using MS-DOS while the other is using AOS to carry out a database package. Data General's package integrating word processing, electronic mail.

John Crawford, general division vice-president, said the firm had invested heavily in its first generation of desktop.

"All too soon the limited personal computers become - when their capabilities are exhausted - there we go," he said.

Shipment both to the US and Europe will start in September from the North Carolina plant. Production will also be made later this year in Hong Kong.

BROUGHTON... Realistic.

Mini manufacturers step up sales drives

by John Riley
Two minicomputer manufacturers, Wang and Norsk Data, both stepped up their third party sales drive last week.

Wang is concentrating on the lower end, drumming up high street dealers to sell its Professional Computer, while Norwegian company Norsk Data is aiming at systems houses to sell its minis.

Following its recent seminar for potential dealers in London, Wang last week held a similar seminar in Manchester for about 25 selected dealers.

Reg Broughton, Wang UK's director of marketing support services, told them that Wang intends to give its dealers 90% of the small

business market (under £5 million turnover), 50% of the medium market, and 10% of the big accounts (over £150 million).

Wang is balancing its direct and third party sales organisation through its Independent Sales Organisation which has been set up to ensure there is no conflict.

Wang hopes to have a network of about 80 dealers. It has about 20 lined up already. Vic Kitchener, ISO manager UK, affirmed that Wang would not muscle in if dealers win large accounts.

The company does not expect its new dealers all to succeed. "I expect realistically that about 10% will go to the wall," said Broughton. "They will expand too

quickly, and overextend themselves." Broughton added that Wang's aim is to become a £5 billion company by 1990, and of this 20% will be direct sales.

Wang's unaudited figures for 1982 are £1.53 billion, a 32% increase on last year. Wang UK is celebrating because it broke through the £100 million order mark and had revenues of about £50.9 million, an increase of 47% over last year.

The main effort is towards the Professional Computer, for which the company has a budget target of 5,000 next financial year.

Since its launch in January, about 350 have been sold, although the machine has only been

available in volume since April.

The Professional Computer will be the focus of a battery of announcements coming up this autumn, an aperitif of which includes the three port R6232 board for the PC, and IBM 3270 emulators launched at Anaheim in the US. They are being anglicised and will be launched in the UK next month.

Norsk Data, the Norwegian minicomputer manufacturer, started its push to attract OEMs and systems houses last week by giving a seminar in London to about 30 OEMs.

Jim Allen, Norsk's commercial sales group manager, outlined the advantages to OEMs of signing up

with Norsk Data. "We give a pound discount based on the value, not on the number of units sold," he said. "The discount ranges from 20% on sales of £100,000 to 32% for sales over £500,000."

"Norsk Data does not work with its OEMs," he asserted. "Our sales force is not to be seen and won't muscle in on you. We want about 10 OEMs to expect their systems house to have exclusive relationships with them." "We don't expect exclusivity," said Broughton, who said Norsk's marketing director Richard Norton agreed.

BT makes a commerce Milepost

by Donald Kennett
LAST week a British Telecom regional division of BT Enterprises, from which Milepost may buy terminal devices and to which it may supply minicomputer-based office systems.

The Leeds-based venture's first product is a turnkey office automation system based on the Scrappbook information retrieval and electronic mail package originally developed at the National Physical Laboratory in the early 1970s.

North-east region has a reputation within BT for being go-ahead and independent. Its previous initiatives have included arranging leasing facilities for customers through Lombard North Central Bank, and taking on an agency for Timeplex multiplexers independently of BT as a whole.

These steps were taken by the region's former data communications manager Bill Ward, who is now general manager of Milepost. The move fits in with chairman Sir George Jefferson's plans for BT to become an entrepreneurial and market-oriented outfit before privatisation.

The North-east is giving the lead to the rest of BT's 61 areas and 10 regions, which became locally managed profit centres in the reorganisation that took effect in April and which are expected to be among Milepost's first customers.

Midlands Region, for one, is considering setting up its own branch of Milepost, for which staff of the original branch would act as consultants.

The in-trading becomes more complex with the involvement of

WARD... Now general manager of Milepost.

BT Merlin, the recently established division of BT Enterprises, from which Milepost may buy terminal devices and to which it may supply minicomputer-based office systems.

Plans for the reorganisation of BT pre-dated the government's plans for its privatisation, but together they mean that up to 90 separate companies - counting the additional profit centres in BT Enterprises and BT International - could be let loose on an expanding UK communications market.

Ten years after it was written, Scrappbook is still regarded as an advanced system by those involved with it - in BT, CTL (on whose machines it was developed), Triad Computing (which adopted it to run on DEC machines), NPL and user organisations including Shell, the Ministry of Defence and the European Commission.

Milepost will sell the system in two versions, based on CTL kit, the basic word processing and message handling version called MP2000 and an enhanced version, MP3000, which additionally has form-filling screen handlers, user-configurable transaction handlers and a batch processing capability.

British Telecom has turned in a £365 million profit as it prepares to be sold to private investors. Profit was 20% down on the previous year's £458 million, but the dip was put down largely to a change in equipment depreciation charging. Those changes cost BT £145 million and without them the profit would have been up 11% to £510 million. Turnover rose 12% to £6,380 million.

bank, it says.

The fund's policies have reinforced the decline of UK industry by not providing the right kind of investment capital and thus starving the new growth sectors, according to the report published on July 14. The funds have been increasingly investing overseas instead and avoiding any risky undertakings.

Trustees of the funds, which

Lack of graduates poses crisis for computer industry

by John Riley
THE computer industry could face a crisis because of an acute shortage of electronics graduates, warned a university professor last week.

Michael Hampshire, professor of electronic and electrical engineering at Salford University, said the government's university cuts had hit electronics engineering harder than intended in some universities, which would mean fewer graduates for the industry.

"I am worried that in three years' time there will be a massive shortfall in electronics engineering graduates because 100 many staff are taking voluntary redundancy, which in turn is leading to fewer students."

Hampshire emphasised that Salford had planned carefully and refused to allow all the staff who wanted redundancy to take it. Even so, the number of staff has been trimmed from 51 in 40 and the annual student intake from 200 to 150 since 1981.

Other universities did not plan

so rigorously as Salford, he claims, and he knows of two universities that have a shortfall of 100 students each on 1981 for this October's intake.

John Davies, professor of electrical and electronic engineering at Aston University, and who is himself taking voluntary redundancy this week said: "The University Grants Committee didn't intend engineering to be cut back so much, but more engineers will take early retirement than say, theologians or philosophers, because they can do things outside the university environment and they also have an older age profile."

Davies will act as a consultant. Both professors say there is no problem in placing students, and that there seems to be a shortage of electronic engineers already.

A spokesman for British Telecom said there was a problem finding good electronics graduates, and some departments were having to look very far for them.

Leader Comment - page 13.

TUC wants pension funds diverted

by George Black
HIGH technology should be a key priority sector in the rechanneling of Britain's pension funds, says a new report from the TUC.

The TUC urges the setting up of a national investment bank to harness the £83 billion assets of the pension funds to regenerate British industry. Service industries with good export potential should also get the support of the pensions

bank, it says.

The fund's policies have reinforced the decline of UK industry by not providing the right kind of investment capital and thus starving the new growth sectors, according to the report published on July 14. The funds have been increasingly investing overseas instead and avoiding any risky undertakings.

Trustees of the funds, which

have increased in volume twenty-fold since the 1960s, should take their duties more seriously and not just act as a rubber stamp, says the TUC. They can themselves bring about major changes to get the vital cash for the sunrise industries such as computers.

They should ask investment managers what they are doing and why and find out whether they are helping to create new jobs, the re-

port urges. The TUC plan calls for local enterprise boards to be established for regional economic planning along lines already taken by five large public authorities.

A legal maximum of 10% should be imposed on investments overseas, it says. Trustees should press for an alternative to the highest short-term profit approach and argue the case for a wider and longer-term view of risk.

BTG eyes spelling bee

by George Black
AN expert system to monitor spelling which was developed at Bradford University may be adopted by the British Technology Group.

Expert Speller derives from a PhD project by David Fawthrop and has been in use at the university since last October.

In 80% to 90% of spelling errors the system knows what you meant to put, claims Fawthrop, who has set up ADAT (Artificially Intelligent Devices and Techniques) in Halifax to market it.

BTG officials who have seen and approved the system now want Fawthrop to produce a "business plan, which he will have drawn up by the autumn."

He investigated more than 1,300 spelling errors and found that they broke down into a small number of categories for which rules could be written. Those rules were written into a Fortran program to prevent the system suggesting unlikely words when a mistake was made.

Lords won't alter protection

by Sue Parliamentary Correspondent
LAST week saw a flurry of Parliamentary activity relating to information technology. Government ministers reported on their computer plans (see page 5) and the two houses got down to dealing with two major bills: the Telecommunications Bill in the Commons and the Data Protection Act in the Lords.

An advisory committee will not be appointed to back up the data protection register, Home Office Minister Lord Elton ruled. He rejected a move by former Labour Lord Chancellor Lord Elwyn-Jones to amend the Data Protection Bill in committee to require the committee to be set up.

Elwyn-Jones complained it was "entirely ineffective" for the government to take a decision on the need for such a committee. The registrar would face a multitude of difficult issues, he argued.

Lord Elton feared that a statutory committee would lead to "an

element of rigidity". The Opposition amendment would leave the committee without functions, duties or powers - "a motor car without an engine".

The amendment was thrown out by 96 votes in 77.

Proposed codes of practice for data users were also rejected. Lord Elton added that users who hired out space computer capacity to others would not have to make a separate registration to cover their bureau role.

The Telecommunications Bill began its second journey through the Commons with new Opposition threats to fight it in committee.

Trade and Industry secretary Cecil Parkinson said it would be a major disadvantage for Britain to lag behind modern developments. Failure to seize the opportunities now opening up would deprive customers of the benefits and lower costs of new technology.

The world market for telecommunications products would be

worth many billions of pounds each year for as far ahead as could be seen - an enormous market opportunity for British manufacturers. The bill would give the industry a chance to develop freely, he said.

BT would be able to seek finance in the market. Customers were already benefiting by the chance to choose equipment from various suppliers. Over 100 products of this kind were now on the market. Businesses could choose their telefax or branch exchanges.

The general public was only just waking up to the new range of goods. Britain had the most liberal value-added network services in the world; 46 service providers had taken advantage of the licence, which would be a major growth area.

He expected to make an announcement before the summer recess about Mercury's international connections.

For the Opposition, Stan Orme said BT could get its increased

investment by being removed from dependence on the public purse, borrowing requirement and tending its external financial affairs.

Labour MP Jack Dromi pressed IT Minister Ken Baker to the future of Rair.

He wanted to know if it would be sold to private enterprise, he was alarmed by reports that it would be done through a company that could share flotation. He wanted second UK factory in the state. Baker believed it was time for private involvement.

Rair gets a million

by Nuala Moran
UK MICRO manufacturer Rair is to get a £1 million injection from a top City institution, the Prudential Assurance Company and the Merchant Navy Officers' pension fund.

Commenting on the investment Mark Potts, managing director of Rair, said: "With our existing financial facilities this funding gives us an important financial capability to fully exploit the demand and the market, in particular for the new Rair business computer."

It will enable our microcomputer products to be developed, marketed and supported in the quantity the market demands."

This is the first time Rair has gone to the City for money. Since

the company was founded in 1975 its growth has been funded from existing cash flow.

Potts explained the reason for the move. "We felt after our worldwide marketing agreements last year with ICL, that any financial partner we became involved with should be drawn from the top level of the major City institutions," he said.

Rair licences ICL to manufacture and market its Black Box range of OEM/technical microcomputer systems on a worldwide basis as the ICL personal computer.

A spokesman for the Prudential explained that it was not policy to canvas unquoted companies. The Prudential was approached by Rair.

Concurrency is in at IBM

by George Black
IBM Personal Computer users will now be able to get the applications-rich Concurrent CP/M-86 operating system after a change of heart by the industry leader.

This is a victory for CP/M author Digital Research because IBM originally turned to Microsoft when Digital declined a fixed price contract. Now IBM has decided that concurrency is such a vital facility it has waived its normal \$1.5 million contract maximum.

Salesmen have been telling IBM based that single-tasking is on the way out and that larger-memory networks micro will need concurrency to make them attractive to buyers.

Meanwhile, Microsoft, which has been given a leg up by IBM with the adoption of MS-DOS as the industry standard, is asking users to stay with them for the

release of MS-DOS 3.0, which, it is claimed, will give the lead into Unix multi-tasking this autumn.

IBM is offering Concurrent CP/M-86 on its XT, the unmarketed hard-disc PC which will compete head-on with ACT's Sirius and Apricot machines, DEC and Texas Instruments.

"I marketing manager Dave Monk said it was continuing to back both horses in the software race, of which there was no end yet in sight. Concurrency was "very key" in this race.

"You do need to do at least two or three things at once, such as the print function while you are getting on with something else."

Microsoft says that MS-DOS this version will be "more truly concurrent" than Digital's product, though the specification has not yet been nailed down.

Experts exonerate VDUs

by Howard Katten
VDUs POSE no threat to eye health, a research panel has claimed.

The panel, a group of experts assembled by the US National Research Council (NRC), reviewed 12 previously-reported studies to reach its conclusion.

The NRC group did its work under contract to the US National Institute for Occupational Safety and Health (NIOSH), a government agency charged with overseeing safety in the workplace.

Niosh, a controversial agency since its inception, has long been a bane of conservatives here and under the Reagan administration has had a conservative head. NRC is a private organisation with, however, strong government ties.

The general conclusion of the 12-man panel was that VDUs pose no inherent risk of cataracts or other permanent tissue damage, according to panel chairman Edward Rinalducci, Professor of psychology at Georgia Institute of Technology. Problems associated with VDUs do arise, he said, because some older VDUs are not ergonomically designed, have been placed in poorly-lit work environments, or are generally uncomfortable.

This might lead to ailments such as backache, eyestrain, and so on.

The 12-person panel, representing disciplines such as ophthalmology, engineering, and psychology, reached its conclusion after reviewing other papers, and did no original research.

Spokesmen for organisations representing labour, such as the AFL-CIO (American Federation of Labour-Congress of Industrial Organizations) and Nine to Five, a group representing female office workers, say the report presents an overly optimistic picture.

In the search for professional microcomputer software...

For further information on Unix based products contact: Sphinx Limited 43-53 Moorbridge Road, Maidenhead, Berks SL6 6PL Tel: (0626) 75343.

THIS year Computer Weekly will be sponsoring two major awards for companies in the UK computer industry under the Recognition of Information Technology Achievement (RITA) scheme.

In conjunction with the National Computer Centre, Computer Weekly will sponsor the award for "systems innovation of the year" and it will independently sponsor the award for the "new comer of the year".

Details of the criteria that companies should fulfil and an entry form will be published several times, starting next week in Computer Weekly.

The deadline for entries will be Monday, October 3 and prizes will be presented to the winners at the RITA Awards Dinner, January 17, 1984 at The Grand Hotel in Birmingham.

CAD cuts airport design time

by Nuala Moran

THE application of CAD techniques to the design of Heathrow's fourth terminal cut the time taken to do the job by a year, according to Ken Gilham, of Scott, Brownrigg and Turner, the architect on the project.

He was speaking at the annual ARC award for outstanding use of CAD techniques. The award is presented annually by Applied Research of Cambridge (ARC), a CAD systems house.

Scott, Brownrigg and Turner won the award for the use of CAD techniques on the design of Terminal 4. This is the largest construction project in hand in the UK at the moment.

When it is completed in 1985 it will handle 22,000 people and 3,000 cars a day, and have facilities for 40 planes.

The application of CAD techniques to the project began in 1979. During design work, about 1,500 drawings were produced in 13,000 workstation hours. Gilham said: "Using CAD techniques doesn't affect the conception or the design. But it does help enormously with the speed of response in terms of producing drawings."

But, he added: "The techniques do aid design by giving a more powerful tool to the designer. They make it easier and faster to make alterations on a drawing."

Scott, Brownrigg and Turner (SBT) was the first UK architectural practice to use CAD. It started off using a bureau service and quickly realised the benefits of CAD. The company bought two General Drafting Systems from ARC in May, 1980.

The General Drafting System

systems are based on Prime 150 and Prime 550 computers. SBT has graphics workstations linked to the 550 and three to the 150.

SBT handled all the drawing for Terminal 4. Gilham said that having all the information on discs makes it possible to do monthly updates of drawings, so it is easier to keep a check on exactly what is happening on site.

It also reduces the number of mistakes that occur in the construction as there are no discrepancies between drawings. "There are also great advantages in being able to change the scale of a drawing without having to redraw it," Gilham added.

It is not possible to assess at the moment how much money has been saved by using CAD techniques. "The cost of each stage of the project is being closely monitored and when it is finished we shall go back and try to estimate what the costs would have been without the use of CAD," explained Gilham.

He suggested that the success of CAD techniques on the Terminal 4 project will mean building sites are computerised before long. "Instead of generating all drawings in the architect's office a disc will be sent to the site and the drawings produced there."

Gilham made a plea that, as the use of techniques spreads, efforts should be made to ensure that standardised drawings are produced.

Ed Hoskins, managing director of ARC, commented that the successful application of CAD to the design of Terminal 4 means that CAD has reached a high level of maturity.

Design of Heathrow's fourth terminal won Scott, Brownrigg and Turner the ARC award.

Cable shopping may wipe out high street business

by Donald Kannatt

ELECTRONIC shopping via cable networks will make high street shops redundant and destroy British industry. It will also undermine local democracy and community services, as local authorities' main income is from the high street.

This was the warning given to the Greater London Council at its public hearing on cable last week by Henry Fabian, secretary of Wandsworth Chamber of Commerce and Trade.

"The economic consequences of this are really horrifying," he said. "Large, aggressive foreign companies would advertise cut-price goods on cable channels, backed by seductive promotions such as the chance to enter a £3,000 prize draw. All the captive cable watcher would have to do would be to push a button."

On the other hand it was essential to have interactive services on cable network, because the UK was at the centre of international commodities trading.

"It will be essential for commercial markets to have access to information, and cable appears to be the best way of getting it," Fabian said. "But the costs are enormous and I don't think it has been properly costed."

The answer was to have cable services properly regulated to protect small business, he said. John Hopkins of Fantasy Factory Video said that the only unique thing about cable networks as a distribution medium was that they could be interactive. "Using banking, shopping and security services, computer programs and other computer-based information banks may well be more interesting than the things coming down the other way," he said.

Constant audience monitoring was an obvious application of the data collection capabilities of cable networks, he added. "As an independent producer, I would like to know not only how many people are interested in my material but what they have to say about it."

If we are interested in any improvement of society, feedback has got to be built in. When you do that, a lot of other things can follow.

He also thought that it was important to have some kind of parallel to the relationship between libraries and bookshops - so that while it should be possible to buy information goods and services, it

should at the same time be possible to get them free.

Otherwise, he said, there would be a danger of dividing society into information rich and information poor sectors.

Geoff Andrews, the newly-appointed chief executive of the Videotex Industry Association, echoed the need for the benefits of cable to be available to all, irrespective of their wealth or where they lived. This was the main aim of his association, he said.

Using videotex as the means of putting interactive services, such as banking and shopping, on to cable networks would be a way of reducing the cost of provision. There was a close relationship between videotex and cable, he said, and therefore the videotex industry should be represented on the Cable Authority when it was set up.

He hoped the Cable Authority would see the need for a code of practice similar to his association's to protect subscribers' interests.

Asked to what extent videotex needed cable, Andrews said that the videotex industry did not need cable, but cable needed the capability of videotex to deliver interactive services.

The chairman of the London meetings, GLC industry and employment committee chairman Michael Ward, objected to the government's planned procedure of evaluating proposals for the 12 pilot cable projects "in secret".

The GLC intended to ensure that the franchise applications were published, that local organisations in each area were consulted and that there was adequate debate on them.

"We are committed to the view that local authorities should be involved," he said, "not to control the operation of the networks, but to ensure there is a proper structure for accountability."

Only that structure will ensure that cable is used to the benefit of local people and not just to enrich a few multinational corporations. It should devolve power rather than concentrate it."

He hoped that the two hearings sponsored by Sheffield City Council and the GLC would enable everybody to learn more about cable. A report on the evidence given at them would be published in the autumn, he said.

A written paper on GLC policy for cable said that, as it was far easier to develop a new technology than to stop it in its tracks, the GLC would aim to steer this technology in desirable directions so as to mitigate the bad aspects and maximise the social benefits.

It would press for cable to be introduced in an integrated national way and for the whole of London to be cabled uniformly in an identifiable time span.

Applications for cable network and service licences and franchises for the first 12 pilot projects will have to be submitted to the Department of Trade and Industry and the Home Office by the end of August.

Two US companies are working between them to buy a licence from the American Revenue Service to supply petrol pumps with support services, but the share of the contract goes to Zilog for \$800,000 systems for word processing and financial spreadsheets.

THB UK subsidiary of Hawthorn won a £250,000 order from Telephone Manufacturing to supply 350,000 20Mbyte Winchester disk drives and controllers for use with BTM 1240 digital telephone equipment. BTM is a subsidiary of IBM.

BRITOL's exploration unit has ordered two links from Veratec to connect two remote plotters into the newly company's computers. The cables will be buried in Telecom's ducts.

COMPUTER Technology UK's main competitor in the market for fair hardware, has won two orders for 3000 series computers. The order came from the Army Royal Electrical and Mechanical Engineers, the other from a fish maker of hydraulic tools.

MUSICAL Instruments Boosey and Hawes has a £130,000 order with Synco for order processing software system will include a processing module for the company's music publishing subsidiary.

DATA General has made the sale of its Eclipse 32-bit computer to Express Diaries. The new computer will be installed at the headquarters in London, Middlesex, and several other offices.

THREE new orders for a multi-million pound supply a computer control system for a Morecambe Bay gas field. The order for four £200,000 order for four chemical systems from a chemical firm and a £1 million order for another gas processing system from Barrow Onshore Gas Terminal.

TWO US companies are working between them to buy a licence from the American Revenue Service to supply petrol pumps with support services, but the share of the contract goes to Zilog for \$800,000 systems for word processing and financial spreadsheets.

SALES BR

ADP sells Megabyte for £1.9m

ADP NETWORK Systems scooped its biggest ever sales for a Megabyte system to BL Systems in London. The Megabyte system is a multi-user software to link three central processors, which have 4Mbytes memory and 1.6Gbytes disc storage.

Newbury deal

SOUTH West Water has ordered £50,000 worth of compatible cluster computers from Newbury Data. The newly-announced C8 controllers will link 42 Data VDUs and 16 machines to the authority's ICL mainframe in Exeter.

Britoil links up

BRITOL's exploration unit has ordered two links from Veratec to connect two remote plotters into the newly company's computers. The cables will be buried in Telecom's ducts.

Fail-safe order

COMPUTER Technology UK's main competitor in the market for fair hardware, has won two orders for 3000 series computers. The order came from the Army Royal Electrical and Mechanical Engineers, the other from a fish maker of hydraulic tools.

Music firm

MUSICAL Instruments Boosey and Hawes has a £130,000 order with Synco for order processing software system will include a processing module for the company's music publishing subsidiary.

Eclipse sale

DATA General has made the sale of its Eclipse 32-bit computer to Express Diaries. The new computer will be installed at the headquarters in London, Middlesex, and several other offices.

Ferranti three

THREE new orders for a multi-million pound supply a computer control system for a Morecambe Bay gas field. The order for four £200,000 order for four chemical systems from a chemical firm and a £1 million order for another gas processing system from Barrow Onshore Gas Terminal.

US carve up

TWO US companies are working between them to buy a licence from the American Revenue Service to supply petrol pumps with support services, but the share of the contract goes to Zilog for \$800,000 systems for word processing and financial spreadsheets.

Priam wins order

THB UK subsidiary of Hawthorn won a £250,000 order from Telephone Manufacturing to supply 350,000 20Mbyte Winchester disk drives and controllers for use with BTM 1240 digital telephone equipment. BTM is a subsidiary of IBM.

BRL... Most recent recruit, and once of DEC.

Matra plans a £90 family micro

by Jack Gea

FRANCE's Matra Group, now 51% owned by the state, plans to manufacture and market a family microcomputer at a price of under 1,000 French francs (£90) before the end of this year, chairman Jean-Luc Lagardere told a shareholders' meeting.

The new micro, developed jointly with Tandy in the framework of the joint venture company Tandy Electronique, will be a direct competitor for the only other French micro in this price range. This is Thomson-Brand's TO-7, which is priced at over 3,000 francs (£270).

Matra has manufactured over 6,000 of Tandy's TRS 80 Model II over the past year and is soon to begin production of its successor, the TRS80/4.

Matra Tandy Electronique is the only sector of Matra's information technology division to have turned up a profit - and only a marginal one - for 1982.

In order to develop software, Matra has signed an agreement in company with its partner, French publishing house Hachette, to promote sales on a reciprocal basis with Le Nordica, a French language press group based in Quebec.

Matra executives explain the poor performance of the firm's information technology division by the difficulties in switching from an artisan-type level of operation into industrial production. The division's losses last year totalled 10.5 million francs (£9 million).

But the telecommunications division, which made a profit of 88 million francs (£7.8 million) last year, is doing well from sales of videotex and computer terminals. Following a major sale of terminals to Tynesware in the US, Matra has set up a joint venture with French software firm Telesysteme to market interactive videography systems.

Matra also reports good progress in computer aided design, technology for its Datavision division which raised profits by 350% last year - with 70% from exports - to 37 million francs (£3.3 million).

Customers for Matra's Buclid CAD system include Westinghouse, the US Air Force, Volkswagen and Thyssen in West Germany.

Matra has recently set up a subsidiary in Japan to develop CAD sales there. This September Matra plans to show a new area network linking micros and a colour version of Buclid at Sicut, France's annual information technology fair.

Prime loses six to an Encore

by Howard Karten

PRIME last week lost six high-ranking executives to a neighbouring start-up firm headed by ex-Prime chief executive officer Ken Fisher.

The loss of the six was the latest blow to the Natick, Massachusetts minicomputer manufacturer, which has been hurt recently with declining earnings and a credibility problem among Wall Street analysts.

Prime is widely rumoured to be preparing to report a significant decline in second quarter earnings compared to the previous year, on higher comparative earnings. The predicted decline is the second consecutive one for Prime, whose stock has lately declined on Wall Street and which lately has reportedly been the subject of derision and mirth among Wall Street analysts.

The managers leaving Prime include a vice president of central marketing operations, vice-pres-

ident of Eastern marketing operations, vice-president of support services and other marketing executives.

Ken Fisher, former president and dynamo behind Prime Computer, last week formally announced the start-up of a new computer company, Encore Computer, headquartered in Framingham, Mass., close to Prime, Data General, Stratus, DEC, and others, will start out corporate life with some high-powered business, sales, and technical talent. Key executives include Fisher, under whose leadership Prime's sales grew wildly, and six executives recruited by Fisher from Prime.

They are Henry Burkhardt, a founder of Data General and, most recently, Gordon Bell, former vice-president of engineering and once a force behind DEC's Vax systems.

Encore itself has no plans at this time to develop products on its own. The firm intends to act as a

kind of holding company or consultancy for other, smaller firms which may either have products currently, or which may require assistance in marketing, product development and related areas.

The company is currently capitalised at \$1 million, all of it coming from the company's founders.

Starting management team also includes seven ex-top managers of Prime.

Encore will also be involved in hi-tech via licensing and joint marketing arrangements.

The concept was 18 months in the making. Fisher compared Encore to Gould Inc., an Illinois-based company which has been completely transformed in the past decade or so from its chiefly battery making and selling operation to an umbrella firm for several high tech ventures.

Fisher was also quoted as saying that there were too many micro-electronic products for the available marketing talent to support.

FISHER... Made it formal.

Just how reliable *is* your financial control?

Keeping track of every financial activity and commitment in a large organisation remains a formidable problem even with the aid of today's sophisticated computers.

To eliminate the "guesswork" and to cope with the complexity of day to day transactions, managers and staff now require constant access to all files via a system working on-line, where each transaction completely updates every record, requisition and budget commitment.

Many organisations are steadily losing control due to the aging of their financial and management software and the inability of custom designed programs to cope with new demands. The consequences are proving disastrous in terms of inaccurate forecasting, unforeseen commitments and inappropriate taxation.

MSA Software - the proven package
We offer a unique financial software package that has been well proven by our IBM users all over the world.

Many of the latest program developments remain exclusive to MSA including our remarkable encumbrance accounting methods which eliminate unpleasant surprises.

Have faith in MSA - The Software Company

MSA

Also important are the integrated manufacturing and financial systems and the micro-mainframe software that enables executives to personally access the central computer at will and to work on their local problems at leisure.

MSA will still be here tomorrow
We are the largest independent computer application software company in the world with revenues in excess of \$100 million. Over 8000 of our systems are proving their dependability with enterprising private organisations, banks and government departments. You can have faith in MSA.

Discussion is invited
If you have the slightest suspicion that your existing methods are a strain on your resources, call MAIDENHEAD 71011 for a talk in total confidence and without obligation. Or post our coupon for the brochure.

To MSA (Management Science America) Ltd.

Silicon Valley goes stale

by Andrew Thomas
US CHIP manufacturers are paying the price for being first. Problems with their ageing installations have led to pollution scares in Silicon Valley.

Fairchild, which set up one of the first manufacturing plants, is on the receiving end of a number of law suits from citizens blaming the firm for polluting water supplies. And a three-month investigation by a Californian newspaper has concluded that drinking water in the valley is threatened by dangerous contamination from chip manufacturers.

Chemicals, including arsenic and phosphorus, have found their way through the soil to contaminate drinking water supplies in over 50 locations. Nine wells have already been closed as a result.

Spokesmen for two UK chip builders maintain that they have never had any problems with toxic waste, and blame the age of the US plants for some of the problems.

"A lot of the Valley plant is pretty old," said one, "and some of it dates back to the '50s and '60s. Their purification systems haven't been brought up to date, and they don't put their waste into the sewers, they store it in separation tanks."

"The area is known for its tendency to earth tremors, and it is quite possible that some of these tanks have been fractured, allowing the chemical waste to escape."

And it looks as if there may be a mass exodus from Silicon Valley in the offing. Apple has announced plans to set up a rival operation 35 kilometres away in Coyote Valley, and IBM, Tandem and Verbatim are also tipped to make the move.

One US congressman, Ed Zschau, is worried that the place where it all started may be abandoned, and is seeking \$32 million to build a museum to mark the innovations made there. If successful, his scheme will take three years to plan and five to execute.

Orb becomes a Science Museum piece
by John Riley
THE Orb microcomputer, launched only last month, is about to become a museum piece. It will feature in a permanent exhibition at the Science Museum which is opening at the end of August.

The Orb, which is manufactured in Brighton by ABS Computers, has a round VDU and comes in bright colours. Those features will act as an eye-catcher to attract visitors to the permanent display on environmental science and office ergonomics which is sponsored by the Chartered Institution of Building Services.

"We are delighted that we were asked to provide the Orb," said Bernard O'Leary, ABS Computers commercial manager. "It will be in the Science Museum on permanent enclosed exhibition for a 10 year period, and will be working with things up on the screen. Since the Orb was launched last month, O'Leary claims that over 200 orders have been taken."

Chip drought hits systems builders

THE surge in demand for semiconductor products components has brought price rises which are welcome to the recession-pressed chip makers. But to the computer builders it has brought with it the prospect of rationing, particularly for memories.

The parts most affected, with lead times stretching out to more than six months, are medium-fast 64 Kbit dynamic RAMs, the staple chip now for many computer builders. Large volume orders placed now are unlikely to be delivered before next year from most sources, unless the buyer has a very close relationship with the chip supplier.

And the 64K parts are not alone. The previous generation of such memory chips, 16K dynamic RAMs, are moving to higher prices and longer lead times too, at a time when many manufacturers have stopped making them and turned to 64K chips. Static RAMs and EPROMs face the same trends, as do the most popular processors, the 280 and the 8088/8086.

The chip manufacturers will

soon be putting certain parts on allocation - rationing customers to particular quantities - and equipment manufacturers which are not locked securely in to supply arrangements with chip makers will find it increasingly difficult and expensive to obtain adequate supplies.

Newcomers to the band of computer builders will inevitably suffer more than established manufacturers with secure long-term arrangements with the chip suppliers. Some observers reckon there is an element of over-reaction, with customers scrambling to get deliveries, and that things will settle down again.

But equipment manufacturers wanting to cash in on the expected boom in personal computer sales this Christmas will find that many of the chips needed are scarce and expensive on the spot market.

US semiconductor manufacturers reduced chip-making capacity during the recession, with many closing down lines and laying off staff. Now that demand has picked up again the companies are building up capacity, but cautiously.

Meanwhile Japanese manufacturers are boosting their investment in plant and equipment. This financial year the top nine companies there spent over a quarter as much again as they did last year on plant and equipment, and are trying to dominate the next phase of the dynamic RAM market - 256K devices - as thoroughly as they do the present 64K market.

Part of the reason for the shortage of 64K chips is said to be deliberate action by the Japanese suppliers to serve their domestic equipment manufacturers by restricting the volume of chips available for export.

Major Japanese companies, including Hitachi, NEC, Toshiba and Fujitsu, have chip factories in the US to serve the market there, plus others in Europe - like the NEC plant opened this month by the Queen.

Now Mitsubishi Electric, which exports around 15% of its 64K DRAMs to the US, is to set up a factory in North Carolina with a starting capital of \$13.5 million. Production is scheduled to start in January 1985.

Chinese show faith in Future

by George Black
FUTURE COMPUTERS, the Surrey firm which produces the IBM PC lookalike, has signed a £2 million deal to sell its machines behind the Bamboo Curtain.

Hundreds of its micros could soon be on their way to the People's Republic of China, potentially the world's biggest market place. And if the volumes and economics are right, the company will consider local manufacture in the Far East.

The deal is the result of a recent contract with General Robotics of Hartford, Wisconsin, which has already sold several million dollars worth of high technology to the Chinese. General Robotics set up contact for Future Computers with the People's Republic, which now deals directly, said a Future Computers spokesman.

General Robotics has made half a dozen sales to the Chinese government of systems based on DEC LSI-11/23s. The US systems house uses disc drives from British companies Rodime and Newbury Data in its systems and acts as exclusive agents for these firms in China. It was offered a number of contracts involving smaller machines and chose Future for the purpose.

According to General Robotics' chairman Carl Pick the two firms are now collaborating on development of a DEC-compatible desktop computer similar to the IBM-compatible micro. It is due for launch this autumn.

Future's managing director Brian Jackson describes the £1,800 FX20 as an IBM thinkalike rather than a lookalike. Running under either Digital Research's Concurrent CP/M-86 operating system or Microsoft's MS-DOS, it includes 128K of memory and 1.6 megabytes of floppy disc storage. Strongest selling point of the machine, besides the low price, is likely to be its ability to run the growing mountain of programs for the IBM-PC.

Pick said in Wisconsin that they had modified the performance of some of the hardware sent to China to get it into a non-restricted category for export. With slightly lower performance kit they were able to escape the nine-month queue for approval by the US authorities.

ALLIN... TeleVideo is moving away from general purpose kit.

TeleVideo, GCS bid for 3270 market

by John Riley
MAJOR VDU manufacturers TeleVideo Systems International and protocol converter supplier GCS Communications have joined forces to tackle the IBM 3270 marketplace.

Following the recent announcement of a joint marketing programme, both companies are developing a new range of terminals compatible with 3270 networks. The first of these, the 9178 Model 1 terminal, based on the TeleVideo 915, was launched last week.

The 9178 Model 1 terminal has a GCS Communications Series 11 cluster controller which emulates or replaces either a IBM 3271 (BSC) or an IBM 3274 (SNA) controller. The companies claim that it offers features similar to those of an IBM 3178/3278 and that at £745 it is 36% cheaper than the IBM 3178 C2 equivalent.

This is the first time that TeleVideo has moved away from its policy of building general purpose products to designing termi-

nals for specific mainframes. "In current programme, with GCS Communications providing the compatible products, it is typical, the approach TeleVideo will adopt," said Peter Allin, TeleVideo's director of European sales.

TeleVideo now claims to be the world's largest independent manufacturer of video terminals with current production running at over 11,000 units each month. "We are looking for GCS Communications to become a highly specialised OEM customer," said Allin. He jointly developed terminals expected to be announced soon.

GCS Communications also announced its new Series 11 30 converter, which is a communications controller suitable for remote job entry batch type applications within an SNA environment.

Starting price for a two part device is £3,324 with cheaper versions for volume sales. It takes up to eight peripheral devices and can be asynchronous devices and as line printers as well as terminals acting as console.

Hoskyns opens shop

by John Kavanagh
THB Hoskyns services group is aiming to do 10% of its £30 million business in the personal computer market this year following the opening of a demonstration and sales centre in central London. Other centres will open in Birmingham and Manchester by Christmas.

Hoskyns specialises in building systems around Digital Equipment minicomputers and is initially offering DEC microcomputers and the Apple Lisa. An IBM Personal Computer dealership will be announced in the next two months.

First-time users are expected to account for 20% of the company's personal computer business but the main markets are expected to be among its existing customers. Hoskyns will offer advice to medium and large customers considering microcomputers for end users or building networks.

"Many of these people are inhibited when they go to a retailer," said marketing director Richard Holway. "They can now come to us for demonstration and advice without commitment."

Hoskyns has adapted all its business packages to run on DEC personal computers.

HOLWAY... Aiming at £3 million.

"Micro customers can get the same sales ledger as the big mini by some of the company's leading companies," said Holway. "They pay more - but they don't have the restrictions of a mini package."

Holway said systems houses had to make "some pretty hard decisions" about personal computers in the next few months.

"Micros are not vital to our survival but if we're going to share in the growth of the market we must have a stake in the fastest growing part."

Siemens keeps out of micros

by Nuala Moran
WEST Germany's largest electrical company, Siemens, will not be entering the German personal computer market with complete systems because it lacks marketing operations for a strong push in consumer markets.

This statement was made by Karlheinz Kaskas, Siemens' chairman. He also said that he knows of no other West German electronics or computer firm that intends to compete against low priced micros

hitting the German market from Japan and the US.

Kaskas said that Siemens will restrict itself to supplying components for personal computers, and continue to concentrate on the market for more sophisticated middle range models.

Siemens is forecast to have a 10% increase in profits for 1983. According to Kaskas, Siemens' profit margin for the first nine months of 1983 was 1.9% up on 1.7% in the previous year.

SOFTWARE FILE

Giro enthuses about Maestro

NATIONAL Girobank is enthusiastic about the programming aid Maestro which has been undergoing trials at its Bootle centre.

The Giro people are midway through a six-month evaluation session to test the promise by distributor Phillips Business Systems that it will boost their productivity by at least 10%.

The £90,000 contract has a buy-back clause if the software fails to meet that condition, but as Ursula Leahy, Girobank's technical standards manager, observed, Girobank would be looking for far greater improvements if it were to make a long-term investment in the product.

Maestro is a Marks and Spencer's solution," she said. "In other words it's very good, but a bit expensive. What we've got to decide is exactly how much we can use it. It seems to have lots of potential."

Maestro, written by the German company Soflab, was adopted

first in this country by BP Oil, whose data processing manager Ron Cowie attested to its value at a seminar in Looe in April. He told delegates to a BIS Applied Systems conference, including a Girobank representative, how Maestro had helped his firm tackle a programming bottleneck.

"One of its attractive features," Leahy commented, "is how it lets you browse through listings. This means we are getting far fewer listings output from the printer, which is really very good. We're moving towards the paperless office, though we've been the last to take our own medicine in this respect."

Girobank began as a batch operation in 1968, converting to online systems in 1975, but still only has 12 terminals among its 230 systems development staff.

One aim of the current trials is to find out how many more terminals would be useful. Leahy

guesses as many as 72. The bank looked at alternative methods such as Unix and Delta before embarking on Maestro. Leahy said Girobank had seemed to offer the greatest flexibility, shifting the strain from its four ICL 2900s to a Philips P7000 mini.

The bank's DP department ran into problems last year when the 2900s which replaced an ICL System 4 became heavily overloaded. The centre was getting overcrowded and on top of this came a dispute over maintenance which involved up to 10-day delays on input for some of the bank's 1.2 million customers.

Now it is undergoing a "major reorganisation of its computer facilities". First step has been the addition of a Tandem mini to assist the 2900s.

The future of the ICL machines is in doubt as the bank goes to open tender on upgrading the establishment.

GIRO... Midway through a happy Maestro evaluation.

BIS buys Cross and creates new division

BUSINESS Intelligence Services (BIS), the £23 million turnover British systems house, has bought 80% of re-insurance specialists Cross Computer Group and Cross Computer Management.

The Cross companies have been in the re-insurance field for 14 years and have installed 27 systems based on their Solar software in the Middle East, Europe, Africa and North America.

BIS, most famous for its Midas banking system, also has interests in the re-insurance area with its Folio package running on IBM System 38 machines.

Solar is an online and real time system handling underwriting and accounting operations. Group founder Peter Cross said the new agreement would enable it to expand its activities which it had been unable to do for lack of capital. BIS recently reported record annual results, with the pre-tax profit of £2.7 million.

The takeover results in the birth of a new division to be known as BIS Solar.

Inmos sets its heart on Occam

INMOS, the state-backed chip maker whose future has been the subject of recent speculation and controversy, is pushing ahead with plans to sell its programming language Occam.

An evaluation kit for the language has been bought by several hundred software development organisations around the world since its release last December.

New Occam moves from the experimental stage towards the marketplace with a set of tools to be called the Occam Programming System, providing support for real time systems design.

"We've created a set of engineering tools and shored them into our workstation," said a company spokesman in Bristol. The workstation to be offered is a modified Sirius micro, with a keyboard tailored to allow single key commands.

The system is already implemented on Intel 8086 chip-based micros and on DEC's Vax supermini running under the VS operating system.

A Motorola 68000 version is due in the fourth quarter of this year.

HOARE... His brainchild.

and Inmos hopes to see it working on its enigmatic Transputer hardware "some time during 1984".

Occam was the brainchild of Professor Tony Hoare, director of research at Oxford University, and Inmos's David May.

It is based on the principle of concurrent rather than sequential operations which Inmos says is vital for the fifth generation of computers. The language has been exciting a lot of interest in Japan.

The arrival of the toolkit could help to bring Occam from the academic world into the commercial world.

MicroPro broadens its Stars

MICROPRO, the Wordstar author, has widened its business software range with Planstar, a financial planning and reporting system to run alongside its other Star products. It is designed for the IBM-PC under the PC-DOS operating system or any CP/M based micro and will be available through the US firm's British distributors and dealers.

Prime deal

US MINI maker Prime is to sell process planning software written by Logan Associates of Henley-on-Thames. The Logan system will be marketed worldwide by Prime. It is already used by Dowty, United Glass and the US General Electric. CAD/CAM-dedicated Logan is 45% owned by ICF, venture capital bank.

Software File is compiled by George Black.

Libra ascends

MBS MICROTEX of Eton is marketing an accounting package based on Microsoft's Xenix operating system to run on the American Altos range of 16-bit microcomputers. It is called Libra.

Acorn languages

ACORNSOFT has put three new languages, BCPL, Lisp and Forth, on to its BBC micro. BCPL is a high level alternative to Assembler suitable for producing screen editors, control systems and commercial packages. Lisp is a basis for artificial intelligence writing and Forth a small and fast system/language.

Appgen deal

IDM of Doncaster has signed an exclusive deal with Software Express of Texas to distribute its Appgen tool in the UK and Europe. The agreement was reached during a recent visit by Express's Bill Adams to see IDM managing director Neil Rajchiff. Appgen is a bridge between Pick and Unix operating systems.

Alpha users get leg up to mini world

by Philip Hunter
USERS of Alpha Micro systems now have an upgrade path into the minicomputer world with three new 6800-based machines offering up to four Mbytes main memory. At the same time the company is boosting its support to its UK dealers with a new sales and service centre in Slough, with another to follow in Brussels to serve the European market later this year.

Also announced is a multi-terminal word processing system for the company's whole AM-100 range of super micros.

The company hopes to spur forward after six years of steady but unspectacular growth, and to see turnover in the next two years to \$100 million. Leonard Palladino, sales vice president, thinks that this large target can be partly achieved simply by building more machines and waiting for the ordi-

ners to come in. "We could increase our sales by a third by just increasing our supply to existing buyers," he enthuses.

Palladino hopes that the remaining growth will come by snatching would-be buyers of traditional minis like the Digital Equipment Vax, and by selling more peripherals. "Before we did not offer to the marketplace much more than a CPU," says Palladino. "We used not to see revenues on peripherals. Now we are offering them."

All micros in the AM-1000 range run the same AMOS operating system, which with multi-tasking the company can claim with some justification comes into the minicomputer class. CP/M is also available, as well as the high level languages Basic, Fortran and shortly Cobol.

Micro News is compiled by Robert Parry

COMPANY PROFILE

FOSTER... "Always invest more in tomorrow than you take out of today."

ACT is exploiting its commercial lead

THIS tide of success is in for Applied Computer Techniques — with a little help from some of its competitors.

The phenomenal success of the Sirius micro, now selling at 1,200 a month, contributed half of the £2.1 million profits reported for the year ending March 1983.

But for this, the company must in fairness give IBM and Digital Equipment some credit for being so late into the UK market with their personal computers, allowing ACT to build a commanding lead.

And quick to exploit this lead, the company recently launched its next 16-bit micro — this time a smaller machine called the Apricot to attack the market for semi-portable computers such as the Osborne.

ACT's bureau wing has not matched the growth of the rest of

by Philip Hunter

the company, but sales increased slightly to £4 million last year against the run of play for the industry.

Here again the company must thank its competitors for being slow to spot new openings for bureau solutions. One such opening was software to apply the government's statutory sick pay scheme, which took effect in April. This alone brought in 50 customers.

The bureau has also held its ground by making increasing use of Sirius micros as terminals, so that customers just use the bureau mainframes for big number crunching applications.

This move has brought in users who want to connect a micro to large databases, but cannot justify buying their own mainframe.

It was as a bureau that ACT began in 1965, founded by the present managing director Roger Foster. Soon to follow was one of the first general purpose software packages, to run payroll.

Foster continued to build ACT as a package bureau well into the 1970s. In 1973 the company announced Compact 8, a simple listing machine to put data preparation into the customer's hands.

10 YEARS AGO

FROM COMPUTER WEEKLY OF JULY 26, 1973: Leasco Software and KLM Royal Dutch Airlines were poised to sign a multi-million pound deal for computerised information handling and communications systems for Iran Air. . . . Ascon Distributors opened a out-price supermarket chain with "catalogue showrooms" equipped with Plessey light pen data capture systems. . . . Fashion house Peter Shires used Garpac programs for the garment industry to analyse and process orders, calculate cloth required, and forecast demand over fashion season, at a cost of £1,500 a year.

PLATFORM

The data register will be too large to work

THE Data Protection Bill, now reintroduced in the Lords, provides for a register of those who use "personal data" in computers or provide a "computer bureau" manipulating such data for other people.

"Personal data" are data manipulated by reference to living individuals who can be identified from the information. The intention is to confine the Bill's provisions to data in computers, but developments in optical character recognition and associated techniques already bring everything in print potentially within its scope.

Concessions in the latest Bill exclude from registration word-processing operations performed only for preparing the texts of documents and data held only for calculating remuneration or pensions from employment or accounting for goods or services.

These exemptions will reduce the size of the register, but they are so tightly drawn that they are not as generous as appears. Using a wordprocessor to compile a mailing list of correspondents and their interests goes beyond "preparing documents or texts"; maintaining a staff leave or duty roster goes beyond the "calculation of remuneration"; a mailing list of potential customers goes beyond keeping records of goods or services "supplied".

The exemptions in the original Bill remain. These include data held by an individual "concerned only with the management of his personal, family or household affairs", but not calculating batting averages for the village cricket club or lending his machine to the secretary of the residents' association for a mailing list of the social service officers with whom he needs to correspond.

Not is that activity exempt as "held by an unincorporated club and relating only to the members of the club". Data held for purposes of distributing articles to people are exempt, but may consist only of their names and addresses and do not include which articles they want to receive.

In any case, both for the clubs and the distributions the data subjects must have given permission for their details to be recorded.

The requirement to register every purpose for which personal data will be used creates comparable problems. Some new useful application of existing software could be unlawful if it has not been

foreseen in the register application.

It cannot be in the public interest to make the sensible exploitation of everyday facilities to increase efficiency potentially criminal, nor to create a new range of purely technical offences.

It could well be wise for everyone with a computer to register for the widest range of activities to avoid unwittingly committing an offence.

It is also far from clear whether registration is intended to apply only to the proprietor of a personal database, or to the keyboard operator as the "person (who) controls the contents and use of the data" — the civil servants concerned evade this question.

But what is the register for, anyway? It is intended to help control the unauthorised disclosure of confidential information held in computer files and to provide the subjects of that information with a right to know if they are represented in the file and if so what it

already well known to you (eg tax offices are told by your employer).

Registration of these primary sources is no help to you at all. Instead, it makes the register unnecessarily big, difficult to use and expensive to maintain.

A register of "secondary files", in which the information has been obtained secondhand without your knowledge and consent, could perhaps be useful, for these are the files which really need control.

But even for secondary sources, the register could easily be too large to be effective. Those who wish to avoid having to disclose what they hold have only to ensure that their activities are covered by a plethora of entries (but if their files are computerised, then the registrar could have online access to the names indexes and answer preliminary enquiries direct).

A simple simulation exercise to see how you could find out which credit checking agencies hold information about you will demonstrate my point.

A register of "secondary files", in which the information has been obtained secondhand without your knowledge and consent, could perhaps be useful

says about them, with as associated right to have inaccurate information corrected and to receive compensation if harm has been caused.

This is a laudable intention, although the details of what is confidential have led to heated debates — to the exclusion of the more mundane but really more important problem of how controls could work effectively.

If you as an individual want to exercise those rights, the register is supposed to help you find out where data about you might be held. In the first place, you know already from your personal experience nearly all the relevant files, such as those held by your employers, colleges, banks, tax office, car registration centre, retailers, customers, social security office, societies, professional advisers, etc. The register is no help at all in identifying these "primary files".

You have yourself supplied nearly all the information they contain about you, or it came from public sources or from sources suggested by you (eg references) or

First, you visit the registrar's office to inspect the register (no charge) or write for certified extracts (with a fee for each entry required). Two sections of Yellow Pages for London provide 10 names, but the important ones will not advertise in that way.

There must be at least 100 for the country as a whole, so you need 100 certificate fees, or you'll have to spend considerable time copying out the details.

Then you start writing to each agency, asking if they have a file about you and what it contains, enclosing proof of identity and not unknown fee (which must not exceed a prescribed maximum).

How far are you likely to get, without very substantial resources of time and cash? Perhaps the first five or 10 on the list — leading to competition between agencies to achieve a low position in the register.

A register is no more useful than controlling unauthorised disclosure of information in computer files. The registrar's staff of 20 will be more than occupied maintain-

Alexander Sandison is a retail brainer. He was involved with putting catalogues into computer.

ing the register and handling enquiries: time for spontaneous supervision of the machine will be minimal.

In any case, offenders are more likely to be outside it within the register.

As a help in controlling identity of, or access to, the register must be considered a dead duck. Yet the Bill stages implementation costs to state and local authorities approach £15 million, with similar running costs at first.

For nil benefit, the register seems to contravene all the government's hopes of reducing expenditure, public services and industry.

Certainly, unauthorised disclosures from files and harm to individuals from authorised but inaccurate disclosure, need more effective and acceptable to the public. It is a structure of purely technical offences, such as "failure to register" and "unregistered activities were eliminated".

Let it instead be made plain that publication to any party of machine-readable data without your consent is an offence, be it an individual, a company or a local authority. Let unauthorised access to a file, whether machine-readable or not, be an offence of "breaking on a par with safe or house-breaking".

Let misappropriation of information from files be the offence of "data-theft".

Let these offences be clearly defined, along with the boundaries between professional privacy, confidentiality and national interest.

Let the rights of individuals to know what is said about them in files be established.

Let there be an Office of the Filing to supervise these matters, investigate complaints and prosecute offenders. Its time could be spent supervising, without bureaucratic complication, the registers, which will assist the public and the supervising any worthwhile way.

MSC's report is the Tops

THE Tops computer training report is a refreshing breath of fresh air compared with the usual claustrophobic and self-congratulatory communications so often received from the Manpower Services Commission.

It is rare for any organisation, let alone a publicly funded one, to examine itself as critically and publicly as this, and Hugh Sharp, the MSC's Head of Computer Training, deserves full credit for acting so boldly and swiftly to reform the Tops computer training courses.

With 60% of Tops trainees — many of whom had given up secure jobs for the lure of the computer industry — failing to get placed months after completing their courses, and with employers confused and increasingly hostile to the scheme, something had to be done.

The proposed answer, worked out with as much help from the industry that Sharp could muster, is to produce a definable Tops product, regardless of where or by whom the training is carried out. Potential employers will have a person with proven aptitude and a basic general grounding in relevant areas to an agreed standard.

Will it work? The simple answer is that it will work if trainees get work. That will happen if employers feel that the training is worthwhile, if the Tops organisation remains flexible, and if the enthusiasm spread from the top to the bottom of the organisation.

For the trainees it will still be a gamble, but they and the revised scheme must be given a chance.

What is the alternative? The report identifies two. The first is for the MSC to draw up a list of suitable trainees, and provide the cash to companies wishing to take some on to train them from scratch.

Although that would guarantee trainees a job geared to a real labour need the MSC sees real political problems in this direction. Small companies lacking training facilities would lose out. However, the MSC should not abandon moves in this direction and should continue to look hard at it.

Another alternative, proving very popular, and which deserves to be considerably extended, is to provide grants to employers to stimulate additional computer training.

The employer selects the trainee and pays most of the cost, but receives grants to offset some of the financial burden. That means that the costs of training are shared between the MSC and the employer.

Bureaucracies often come up with good ideas but they fail to work out as their instigators intended. A sad example of that came to light this week, when it was revealed that far more electronics engineering lecturers had taken advantage of voluntary redundancy than the Universities Grants Committee had intended.

That was because electronics experts are more readily employable than, say, theologians.

But the effect has been disastrous on the student intake which will result in a massive shortage in three years time. Let us hope that the new Tops scheme will not fall into that mess.

Well done, Alvey

CONGRATULATIONS are due all round this week on the Alvey Programme for advanced computing research. We have already congratulated the government in this column for putting up £200 million to back the programme, although our misgivings about the 50% limit on project funding have been echoed by the industry.

Now, with the publication of the programme's first progress report last week, congratulations are in order.

The head Brian Oakley, has acted quickly to appoint directors for the various areas to be covered. And even before some of those directors start work full-time they are setting up projects involving collaboration between universities and companies.

GEC, ICL and Logica deserve a mention for freeing senior people so quickly on secondment.

And the industry is to be congratulated for showing new willingness to collaborate, not only with universities but between otherwise rival companies.

1984 and all that . . .

THIS week's example of the strange things people say about computers was sent in by Roger Dale of Think, North Yorks, who writes: "We are told of the brochure, Mr Paul Feldman, the director fined in court, said 'These are the manufacturer's lies, and as they are computerised, some of the files cannot be deleted.'"

Daily Mail

LETTERS

SSP can help to fund occupational sick pay schemes

THE replies to your correspondent Mr Dillaway (Letters, Computer Weekly, June 16) appear to have taken on the calibre of an Exocet. I have every regard for Mr Dillaway's expertise in the area of payroll and suggest that it is this very expertise that has coloured his views on SSP.

The transfer of responsibility from State to the employer for the payment of sickness benefit after 36 years of established practice was undoubtedly not going to be a very straightforward operation.

Certainly, judging by the interest in the application of computer in personnel at the recent IPM exhibition, it has proved to be a catalyst in the development of true personnel database applications.

The discussion so far has been successful in clouding the most important aspect of SSP, namely the analysis of the contribution that SSP can make towards the funding of occupational sick pay schemes.

This contribution is wholly dependent on the current qualifying day agreement between the em-

ployer and employee.

To avoid further ill-informed discussion, I would like to draw your attention to the fact that, providing there is agreement between the employer or employee's negotiating body and employee or employee's appointed representative, and that in any week, where a PIV or part of a PIV falls, there is at least one qualifying day, qualifying days can be determined according to any formula.

The limitation of fixed qualifying day patterns, eg Monday to Friday, by the majority of computer software has resulted in SSP benefit below supplementary benefit level.

Where an employer has a generous occupational sick pay scheme, this rigidity is denying him the opportunity to recover considerable enhanced levels of benefit.

Disappointment is an unjust word for feeling pretty good

I THINK your article of July 14 giving the indication that I had suffered two major disappointments in the month of June was a little unjust.

My company, United Leasing, obtained a full listing on the London Stock Exchange during last month.

It is true that part of the shares were not taken up immediately and this was almost certainly due to a downturn in the Stock Market during that week.

On the other hand, the United Leasing share price has remained constant at its underwritten value of £1.40.

This to my way of thinking represents a strong degree of confidence in our company, which is certainly not disappointing.

Computer leasing is not an easy subject to understand and we have always recognised that the initial appeal of our company will be to a limited market.

As far as the general election is concerned, I stood as the SDP/Liberal Alliance candidate in Ealing/Acton.

In 1979, the Liberals obtained 8% of the vote in this constituency; last month the Alliance obtained 24%.

Belling/Acton is a Conservative seat where the sitting member is a junior minister at the Department of the Environment.

In the recent boundary changes an additional ward was added into the constituency, which improved the Conservative prospects even further.

Despite this, in the election I took 3% from the Conservatives and 12% from the Labour party.

In short, the month of June saw the company which my brother and I formed receive a market capitalisation of just under £19 million and me myself obtaining

Equations

IN my letter (Computer Weekly, July 21) there is a minor printing error which will be self-evident to anyone who takes the trouble to work it through.

In paragraph four the equation should read $53.3\% \times 10,000 \times 0.92 = 6,150$.

In paragraph five the equation should read $53.3\% \times 7,500 \times 0.90 = 6,000$.

The % sign is missing from the printed letter in both cases.

STANLEY MACKINTOSH
Harrogate.

NCC is working for standards by 1985

YOUR leader of June 30 argued a need for national standards at all levels for computer occupational. Of course, if computing is to become a properly organised profession, this must be the aim.

The Manpower Services Commission has as an objective the achievement of nationally recognised standards for all occupations — computer occupations included — by 1985.

We at the National Computing Centre are committed to work with them towards this goal.

In the field of systems analysis the National Computing Centre Basic Certificate is already widely recognised.

The NCC is currently working with City and Guilds to restate the existing programming qualification, to which your leader referred, with the aim of achieving similar recognition for it as well.

However, it must be recognised that employers will continue to

look for experience as well as for qualifications. It is our view at the NCC that every step possible should be taken to combine training and experience in a structured way (eg through sandwich style courses).

The expansion of schemes of this sort is at least as vital to progress as the achievement of national standards.

PATRICK RAYMONT
Manager
Education, Training Strategy,
Privacy & Security Group
The National Computing Centre
Manchester M1 7ED.

Training reminder

YOUR leader of June 30, 1983, in which you comment on the lack of national standards in computer training, omits to mention the recent formation of the Association of Business and Administrative Computing.

This association, which has been created to satisfy a real demand, will have its own examination system and membership structure.

You did in fact cover the association's birth in your excellent column!

Hambro Life: the IBM enthusiast

COMPUTERISE early and you can save a lot of time delugging, fudging and patching. Hambro Life, one of the UK's youngest and most exciting financial institutions, has applied this philosophy since its birth in 1971.

"We always gear the timing of a new product to the time the computer system is ready and working," says deputy systems manager Geoff Fletcher.

But, there is a danger that this approach will impose the limitations of the computer system upon what can be offered to the customer, admits executive director of management services Lawrence Churchill.

Quick to reply to this potential self-criticism, Churchill continues: "But you can gain by identifying the issues early on. If something can't fit into the existing system, build changes into it."

Hambro is the UK's largest specialist in unit-linked life assurance, rather than the more conservative option of endowment assurance. Under a unit-linked policy, the investor's cash is sunk in a fund, or several funds, which are used to buy shares in companies.

This makes the investment more dynamic than endowments, with a better chance of beating inflation. But there is also the danger of falling worse than under an endow-

ment policy, which offers a guaranteed rate of return, calculated retrospectively when the policy is surrendered.

The company is capitalised at £400 million, and its computer system has to cope with a flow of one million premiums a day, as well as 1,000 new policy applications.

Unlike some of its competitors, only about 15% of the company's sales are made through insurance brokers. Hambro was therefore able to make a tough stand last year when some insurance companies rocked the established order by offering brokers bigger commissions to peddle their policies. Steadfastly, Hambro refused to give the brokers an extra per cent.

The bulk of Hambro policies are sold by 3,000 self-employed salesmen, who work entirely on commission. Only Abbey Life among the competition has such a large sales force.

Hambro's salesmen earned an average £12,000 each last year, a few as much as £100,000. But Churchill is quick to point out that the top salesmen probably have to pay a personal assistant, an office manager and buy a computer out of their enormous salary.

The company is busy now giving its salesmen micros for their

own record keeping, although there is no plan to link salesmen up to the central IBM computers. Nor is there going to be a change to online updating of the databases—the risks of data corruption are too great.

In fact the company is slow to bring new technology on board, being content to let others break in new hardware. The company does however regard itself as an innovator in computer applications, and claims it was one of the first to computerise the complex calculations of insurance policy surrender values in the early 1970s.

Hambro provides a classic advertisement for IBM, lashing faith and praise on the computer industry giant. It relies on IBM to maintain compatibility between different hardware, including the Personal Computers, which it is thinking of giving to salesmen instead of the present choice, the Sirius micro.

"IBM has thought through its long term strategy for large companies, especially in the financial community," enthuses Churchill.

Last year Hambro implemented a sophisticated database system with online enquiry. The base can be interrogated under four headings: policies, clients, selling agent, and details of the contract.

Development of this new base was costly — 250 man years valued at £7 million.

Previously the company had used a home-grown tangle of files, known colloquially as Phase 2. "It was becoming inflexible," explains systems manager Ian Seward. "We had to improve the speed of reaction."

There are over 200 programmers and analysts at Hambro. The company believes that there is a limit to the number of good systems people that can be grown at home. "You probably won't find the best analyst in the UK in the motor insurance claims department," says Fletcher. Certainly not in Hambro's case because there is no motor insurance claims department.

Hambro says it has overcome the shortage of crack systems people by joining the top 10% of salary payers. A good systems person with five years' experience will earn £13,500 plus car. A senior systems analyst will earn £15,000 plus private petrol as well as the car. Who says that perks are dying?

The classical discrimination between programmers and analysts is not to be found at Hambro. Programmers start at £6,800, rising to £10,500 after two and a half years.

STEGALL... Happy with Hambro's £20,000 perk-laden package.

There is scope in the programming department to climb to £20,000 plus car and petrol, the package enjoyed by programming manager Peter Stegall. No wonder that the company boasts a low turnover among staff and a high job satisfaction.

The company is now expanding into other financial markets. It recently brought out Allied Hambro, allowing unit trust policies to be

offered. Also acquired was the private London bank, Dunbar, which actor Sean Connery is a major shareholder. This move, some of the cord linking the company with its parent Hambro merchant bank.

Hambro has also forged links with the Guardian Royal Exchange, which offers more insurance policies like motor house.

PEOPLE

IBM board member elected

Alex Henderson (above) has been elected to the board of IBM United Kingdom as telecommunications director. He joined IBM in November 1964 as a data processing salesman. His management appointments have included DF branch manager, director of international centres, and DF marketing staff manager. In his current position he is responsible for the marketing of IBM's telecommunications products and services in the UK.

Chris Lusby Taylor has been appointed principal support consultant at Digital Research. He was previously technical support specialist at Intel Corporation (UK).

DIARY

AUGUST 5, 12, 19, 26

Practical Wordprocessing is a user training course held at the Barton Grove Micro School, Warrington. Other courses in August cover wordprocessing theory and practice, electronic book-keeping, building and using an integrated system and building and using a database. Details: Training manager, Warrington 36642.

AUGUST 8-11

Practical Computer Auditing for business and systems analysts is organised by Control Data. It will take place at Control Data Institute, London. Cost is £445. Details from Sylvia Lyons, 01-240 3400.

AUGUST 8-12

Introduction to Organisation and Methods is designed for those involved in administration or management who need to review current systems. It takes place at the Henry VIII Hotel, London. Course places at £510 may be booked through the course registrar, Cherry Bigmore, on 01-261 9237.

AUGUST 16

Data Communications Overview at the Control Data Institute, London, gives an introduction to modern communications systems. Organised by Control Data, it costs £145. Details from Sylvia Lyons, 01-240 3400.

AUGUST 30-SEPTEMBER 2

The second International Conference on Database, organised by

THE 1984 Society for Information Display International Symposium will be held at the San Francisco Hilton, San Francisco, from June 3-7, 1984. It is run by the

Authors are invited to submit a 35-50 word abstract and a three to seven page technical summary by December 5, 1983, to Hildegard Hammond, Publications Institute for Research Services, 70 Varick Street, New York, NY 10014. Tel: (212) 620-3388.

TELESOFTWARE is an international conference at the Heathrow Hotel, London, organised by the Institution of Electronic and Radio Engineers. It will take place on September 27

Cyril Townsend has been appointed chairman of Centre-file, the computer bureau subsidiary of National Westminster Bank. A former managing director of Centre-file, he succeeds Tom McMillan, who has retired as a director of the bank and as deputy chairman of Lombard North Central, NatWest's instalment credit and leasing subsidiary.

Bill Smith has been appointed commercial director of Mellorata and has acquired a shareholding in the company. His appointment to the board is in addition to his present duties as general manager and he will continue to be responsible for the day-to-day running of the company. Smith joined Mellorata in 1981 as financial controller.

Trident Computer Services Group, the Farborough-based contract staff and computer maintenance consultant, has appointed Bob Mitebell (below) as financial director, six months after he joined the company. In December 1982 he was made financial director/designate, after carrying out an audit for Trident's 1981 successful flotation when he worked for an accountancy firm.

Alan Jalland-Hassell has joined Management Science America as a systems consultant, with responsibility for indirect marketing worldwide. His appointment follows six years with Rank Xerox where he was systems development consultant.

Peacree Software International has appointed Ronald MacKay to the position of software support consultant. His previous experience includes the position of senior systems analyst at Rank Xerox (UK) as well as six years with the Scottish Office Computer Service in the post of systems analyst.

Delta Data Systems Limited has promoted Ian Davies, whose sales area covers Wales, West Midlands and North of England, to senior sales executive to head a new sales team. He joined Delta Data Systems in 1981.

Sinclair Research has appointed Charles Cotton as overseas business manager and Ronald Cohen as a non-executive director. Cotton joins Sinclair from British Leyland, where he has worked for 12 years, most recently as overseas operations director for Leyland Trucks. Cohen is the managing director of both MMG, the investment banking services group of which he was a founder in 1982, and of Alan Patrick Associates, its venture capital firm.

IBM Cobot Review, a course organised by Altergo Education, takes place in London. Aimed at inexperienced Cobot programmers, it costs £450. Details: Altergo Education, 01-836 9303.

Implementing and Operating Local Area Networks is a seminar organised by Frost and Sullivan. Taking place at the Mount Royal Hotel, London, it costs £425. Details: Carolyn Budd, 01-486 0334.

Advanced IBM Cobot is an Altergo course for programmers with at least 12 months' Cobot experience. To be held in London, it costs £450. Details: Altergo Education, 01-836 9303.

PLI Consolidation is an Altergo course for inexperienced PLI programmers. It takes place in London and costs £450. Information: Altergo Education, 01-836 9303.

and 28, 1984. Call for papers has been issued and authors are invited to submit synopses of proposed contributions under the headings Broadcast Systems, Interactive Systems and Wideband Cable. Papers will be considered on topics including: systems descriptions, transmission techniques, provision of services, equipment, applications and operational experience. Synopses of about 200 words should reach the committee by November 1, 1983. Final papers are required by April 1, 1984. Further information from the Conference Secretariat, Institution of Electronic and Radio Engineers, 99 Gower Street, London WC1E 6AZ. Tel: 01-388 3071.

Senior appointments have been made by Standard Telephones and Cables in two of its management companies. John G. Cottrell (above) is to be the managing director of STC Telecommunications. He leaves his post of managing director of STC Communications International, but remains a director. He also continues on the boards of Standard Telecommunication Laboratories and IAL. James P. Uttersson, deputy chairman and managing director of IAL, is to replace Cottrell as managing director of STC Communications International. He also takes over the chairmanship of IAL.

Roland Magnin has been appointed managing director of Rank Xerox. He has succeeded Paul Alaire, who has returned to the US as senior vice-president and chief staff officer of Xerox Corporation. Born in Paris, Magnin is the first managing director of Rank Xerox who is neither British nor American. In October 1981, he was elected to the board of Rank Xerox in London and became director of marketing, planning and operations support. He was appointed deputy managing director in January this year.

Gail and Nick Birrell are soon to leave for America with GE Professional Services Company, formerly LTI Consulting Services Corporation. They will be assigned to a project team in one of GE's offices across America. Until recently, Gail Birrell has been working with Chivas Brothers in Paisley and Nick Birrell with Polaroid in Dunbarton.

Versatec Electronics, the UK subsidiary company of the \$100 million Xerox subsidiary, Versatec, has appointed Doug Christie as general sales manager. He will be responsible for sales of the company's products throughout the UK, and through distributors in Europe and certain overseas markets. He comes from the European operation of Versatec, where he was European regional sales manager.

The great ACT hot hike

ACT picked one of the hottest days of the year to move a five ton mass of ICL computer equipment from its Birmingham to its Bristol premises. And not a hitch was there to report.

Indeed the hardware was back on the air ahead of schedule.

The only aggravation in the heat was from a few unlucky souls whose cars were trapped as police cordoned off the street in Bristol. This was necessary since the computers were too big to be brought in through the front door of the Bristol building, and so had to be hoisted up through a fourth floor window by crane.

The move was immaculate in its careful coordination of customers, staff, ICL engineers and local police.

It began at eight o'clock in the morning when a team of ICL engineers entered the Birmingham building to disconnect equipment including an ICL 2950, two 1/2-ton line printers, disc drives and other peripherals.

Meanwhile the cabling under the false floor was rushed ahead of the main removal van to be laid in wait for the hardware in Bristol.

After the hoisting up into the new computer room, which took three hours, it was back to your trusty ICL engineers to remake the jigsaw of computer pieces as before.

Tony Brin, managing director of ACT's bureau, was full of praise for the ICL team's efficient handling of the operation, and gave them a slap up feast afterwards for their day and night labours.

Both computers — the one moved and the one already resident in Bristol — were running normally again by six o'clock on Sunday evening.

ACT had decided to move the hardware down from the Midlands to offer a more resilient service in Bristol with one computer taking over from another if it fails.

The company has taken on five extra staff at Bristol to cope with the extra work.

ACT... Pulling its hardware together.

Digicomp puts Ada on a micro

A US company is aiming to scupper critics of Ada who say that the language is far too big and unwieldy in its full form to be accommodated on micros. Digicomp Research has announced that its Delphi-100 supermicro can run Western Digital's STC-Ada compiler, as well as a range of software development tools.

Just one little snag: neither the compiler, nor the micro is available yet in the UK. But Digicomp sales manager Jeffrey Cox says that his company is negotiating for the use of Western Digital's European sales outlets to market the Delphi micro with the Ada compiler.

"Western Digital needs our hardware," says Cox. And Digicomp certainly needs Western Digital's Ada compiler, which looks certain to be the first to reach the full ANSI standard established February 1983.

The full Ada is certainly a large language, and Digicomp will be using Western Digital's 16-bit Microengine chipset to execute the code produced by the compiler. There will later be the option of upgrading to the Motorola 68000 chip which has 24 bit address lines and will enable larger programs to be run.

The record book, the first Ada compiler to be validated by ANSI, the American National Standards Institute, was one developed at New York university. But this is really only for show and is not capable of running serious programs because it is painfully slow. It was merely an academic exercise to help produce a formal definition of the language.

Western Digital's compiler produces Pascal p-codes which executes much faster.

The compiler has already completed a successful dummy run using the test suites of the US Department of Defence. Formal approval from ANSI should follow.

According to Electronic Ap-

Two cheers for engineers

SOFTWARE engineers have plenty to cheer about these days. Well, two things anyway — their pay and their status.

You may not know just who they are, but no less august and august a body than the Institute of Electrical Engineers has offered them membership. And now we hear that their salaries have risen by 25% in the last three months. Experienced job seekers in this market can name their price, according to a survey by a London contract staff agency.

Other estimates of the salary rise are not quite so dramatic, but figures of between 10% and 20% are commonly quoted. At the same time salaries for junior programmers have been almost frozen for the last two years, certainly lagging a little behind inflation.

A result of this is that salary differentials have increased. Junior programmers usually earn between £6,000 and £8,000, while a senior systems analyst can expect double this, as well as a company car.

According to Electronic Ap-

pointments, the agency has conducted the survey, which is a war people could do even better than they had more confidence in themselves. Encouraged by the results of the survey, the agency has set up a new permanent recruitment section.

"We find most people underestimate themselves," says the agency's managing director, John Spelton. "They may be a bit out about asking for the right price, but we will negotiate it for them."

THESE two multiplicative show how the 10 digits from 0 to 9 may be arranged in two groups of five, so as to give not only the product, but also the multiplier one possible. This week's puzzle is to find the two five-digit numbers which, when multiplied together, give the largest possible product. Hint: Both these numbers have a two figure multiplier. See page 55 for the solution.

CONFERENCES

THE 1984 Society for Information Display International Symposium will be held at the San Francisco Hilton, San Francisco, from June 3-7, 1984. It is run by the

Authors are invited to submit a 35-50 word abstract and a three to seven page technical summary by December 5, 1983, to Hildegard Hammond, Publications Institute for Research Services, 70 Varick Street, New York, NY 10014. Tel: (212) 620-3388.

TELESOFTWARE is an international conference at the Heathrow Hotel, London, organised by the Institution of Electronic and Radio Engineers. It will take place on September 27

COMPEC '83

The UK's premier computer show.

Sponsored by
Computer Weekly

November 15-18, 1983.

Grand Hall & National Hall, Olympia, London.

Britain's biggest showcase for computer professionals. Double the size, double the space for 1983!

Time and again, COMPEC has proved itself to be the leading marketplace for the computer industry. So much so, next year we're increasing the selling space, using both Grand and National Halls at Olympia. With 40,000 high calibre visitors expected, we're going to need it!

Make their business your business...

The nation's increasing computer use — and its diversification — is reflected not only in very high attendance figures, but equally important, in the range and importance of COMPEC's visitors. These are the purchase-decision makers for everything from mainframes to software. And everything in between. What's more, nearly 50% of all visitors can be expected to be either senior management or board members. And these are the people you want to meet.

Get the full story.

Simply fill in the coupon below and we will send you full details of COMPEC 83. It's Britain's biggest show for computers, systems, peripherals and software.

Incorporating the highly successful **Software Village**

COMPEC '83

To: The Advertisement Manager, Computer Weekly, Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS.
I am interested in exhibiting at Compec 83. Please contact me.

David Broad, chairman of Comart and the British Micro Manufacturers Group, writes about . . .

What the UK micro makers want from Ken and Maggie

THE BMMG (British Microcomputer Manufacturers Group) was formed over two and a half years ago by concerned managing directors of British microcomputer manufacturing companies.

The meeting was prompted by the first ever appointment of a Minister for Industry and Information Technology, Kenneth Baker, and a meeting had been arranged to ensure the DoI was made aware of key policies that could affect the future of this very important sector of British industry.

Further to this meeting, arrangements were also made for representative discussions with the CCTA (Central Computer and Telecommunications Agency), the NCC (National Computing Centre) and other bodies having effect on the national strategy for microcomputers.

From the outset the participating manufacturers were determined that the BMMG should not become merely a talking shop or a bureaucratic trade association far removed from the day to day topics of strategic interest. Representation was very much by the chief executives of the micro manufacturers concerned.

Following the announcement of the original preferred microcomputer list by the CCTA, many more manufacturers were in contact with the group expressing dissatisfaction with the very small number of UK suppliers included on that list.

The initial manufacturers participating in the BMMG particularly concentrated on business microcomputers in the price ranges £2,000 to £5,000 but it was soon agreed that the brief should be widened to include all UK manufacturers and also to include all applications.

It was not long, therefore, before the number of companies in the group had approached 20 and decisions taken to commission professional assistance for the secretarial services of the group.

Today the enlarged council of the BMMG has members specifically responsible for initiatives in the field of exports, standardisation, commercial policies and tariff duties, and also the important responsibility of reviewing the suitability of new members to join the group.

Present policies of the group are targeted at achieving progress in the following specific areas:

Unfair duty rates: For many years, executives in the computer and electronics industries have drawn attention to the inequities of the duty rates which vary on components and assembled microcomputers, which has the direct effect of discouraging manufacture of microcomputers in the United Kingdom.

Representations have been made in the past by individual companies but the BMMG has adopted, as a top priority, the task of ensuring that some changes are made.

The difficulty has been that duty rates span several ministerial and departmental areas, from the standpoint of their impact on industry policy, finance and trade. It was therefore important to set up an initiative that was involved in extensive liaison with government on the one hand and ensuring that the widest possible measure of industry support was achieved on the other.

BMMG vice chairman Nigel Smith has been quoted in many industry journals as demanding urgent action in this field and it was therefore possible for the

BMMG to arrange the largest ever number of manufacturers to visit the Department of Industry in June to demand early representations to the European Economic Community to enforce a change.

Unfortunately arrangements for the General Election have intervened but with the government now returned, early meetings are planned with Kenneth Baker in his new role within the combined Departments of Industry and Trade.

How government can be our best customer: The BMMG has been in close contact from its outset with government departments and the procurement agency, CCTA, that is responsible for purchasing microcomputers in the United Kingdom.

In its first year a very successful seminar was organised in conjunction with the NCC and the Department of Industry that, for the first time, brought before many senior members of the Civil Service, papers that identified exactly how UK microcomputers could be used with good effect to improve efficiency, while providing considerable potential to the UK micro manufacturers themselves.

The BMMG is pleased that in the latest list of announced microcomputers for preferred government purchase, seven of the 12 manufacturers are now, not only manufacturing micros in the UK, but are owned and managed by UK executives.

But we have been pleased to agree with the CCTA a basis upon which systems not on the list may still be proposed, in circumstances where significant cost savings can be achieved or the specifications and applications of the system are particularly suited.

The government marketplace for micros has been drastically under-exploited in the UK over the last seven years of the microcomputer revolution.

For a sector which represents over 50% of the gross national product and spending power, the 3% or so of manufacturers' business that is represented by government is really appallingly low.

There is an urgent need for manufacturers and government, together, to work in constant campaigns of awareness and constructive proposal to ensure that the implementation of new technology throughout the government sector is vastly increased.

The BMMG is pleased that many large microcomputer schemes, including the DHSS, could now make a favourable impact in future. It is particularly important that UK microcomputers are selected for these applications.

Government is rightly concerned from the point of view of security, and also future service and support of its administrative systems, that manufacturers are able to provide this continued service.

There is no better way of ensuring accountability for manufacturers than for their operations to be based in the UK, where lines of communication are short, and where there is a joint resolve to both develop and optimise systems to be even more suited for public sector applications.

Working with others: The BMMG has always co-operated actively with other trade associations and representative bodies, to ensure that matters of common interest are pursued as far as possible. The BMMG has held joint events with the Computing Services Association (CSA), the trade association more particularly concerned with

"There is an urgent need for manufacturers and government, together, to work in constant campaigns of awareness and constructive proposal to ensure that the implementation of new technology throughout the government sector is vastly improved."

the supply of software and services to the computer industry, and also with the CBI (Confederation of British Industry), where CBI Director General, Terry Beckett, has supported the BMMG's Five Point Plan.

Reports by both the Electronics and Information Technology Board of NEDC, emphasise the importance of the trade association in providing consistent input to government to improve the quality of decision-making for the future. Membership and representation: The BMMG has seriously considered the structure and representation of the group, from the standpoint of ensuring that it truly represents British microcomputer manufacturers.

Of course, in many instances it can be difficult to establish to what extent a microcomputer is manufactured and designed in the United Kingdom, but the policy that has been used throughout is one of admitting companies who not only manufacture computers in the UK but are also owned and controlled in the UK.

The BMMG recognises that in order to remain representative and to support a degree of membership

necessary to finance high levels of group activity, we should not be restrictive on membership.

Early policies, for instance, insisted that all member companies had been trading for three years and were in a position to disclose accounts accordingly. Now many more recent and smaller companies have entered the market, many financed by large amounts of start-up capital, these policies have been rethought and the BMMG is increasing its membership and encouraging other organisations to join.

A roof over our heads: One of the problems that has long faced high technology companies is the gross inadequacy of suitable accommodation.

The classical industrial building is designed for organisations with large requirements for manufacturing space, with very little technical accommodation. The high technology companies need much smaller amounts of productive space but require accommodation for large numbers of technicians, support and service personnel.

Although the Herring Son and Daw report identified this problem and applied pressure to the

NEDC, the Chancellor and others concerned, the recent Finance Act only nibbled at the edges and increased to a small extent the amount of office accommodation that was allowable in a new building, from the standpoint of tax relief via industrial building allowances.

A complete rethink is now needed on the property requirements of the electronics industry and the BMMG will be backing all interested parties and trying to organise a major change in this field. The IT industry and organisational role: BMMG believes that government has a very important part to play in co-ordinating developments in the microcomputer industry.

We have also been anxious to point out to government that it is in a unique position as a customer, a supplier and by providing the regulatory control, to provide the key influence for bringing organisations together to compete with the US and Japan.

Whatever government has provided the lead, and proposed a mechanism by which these consultations and consensus can take place we have always been anxious

to support them.

My own company is the microcomputer organisation: the suppliers sectoral committee. Focus was an initiative set up under Department of Industry leadership and as NCC secretariat, to coordinate our own input to the wide range of darts-making mechanisms to ensure that we did not lose sight of the strategic advantages that could be gained by the correct use and endorsement of standards, able for British manufacturers.

We have also supported, at the outset, the work of the National Computing Centre's (NCC) Microsystems Centre in London runs basic courses in how to go about choosing the right software package.

BMMG also supported recommendations of the E Committee, having provided advice and input to it, and we see the work of this leading to real resolution in relation between manufacturers and academics.

We are particularly anxious to exploit the proposals of the E Committee, which also believe that small to medium-sized companies should be involved in funded development as well as large ones. A part of many initiatives, such as the feature of the E Committee programme is that medium-sized organisations which can provide the staff and jobs for the future, are excluded.

Now that a network of microsystems centres has been established, and that more work has been approved for publication, it is intended that a British microcomputer centre will be familiar with the capability of the UK machine.

A Software Directory has been sponsored and will become a "low pages" for the future, ready reference for clients and UK software for all types of business applications.

In addition to the above initiatives and many others BMMG continually providing various input to all organisations in the UK responsible for formulating policies for the IT industry. Why should manufacturers join the BMMG? Our industry consists of many medium-sized companies determined to become larger companies of the future, more jobs and more opportunities.

Unfortunately in the day to day technology change, each company by itself, has limited ability to make a lasting impact on the regulatory agencies.

The BMMG, from its days, has provided the means for representing the voice of manufacturers and their voice does not go unheard. Secondly, because of the representation to the regulatory agencies, being at a very senior level, opportunity is provided for businessmen concerned with the industry, to meet and discuss terms and opportunities of interest, cannot be overestimated.

There have been many examples of inter company co-operation, also of agreement on the setting of certain standards.

All these matters make it clear that the BMMG maintains, both its role and its ability to follow the resources to follow the needs of the British microcomputer industry.

SOFTWARE COSTS

Paul Walton investigates the seemingly high prices of software packages imported from the US by distributors

Why the Atlantic crossing is such a pricey package deal

ARE consumers of US-written packaged software being ripped off? How widespread is the practice of mysteriously exchanging the dollar sign on the original US price for a pound sign on the UK price, making imported purchases a third to a half more expensive over here?

The answer is that the "missing" 30%-50% price hike is swallowed up because the software is actually crossing the Atlantic. It does not necessarily go straight into the pocket of some unscrupulous dealer.

Philip Virgo, manager of the National Computing Centre's (NCC) Microsystems Centre in London runs basic courses in how to go about choosing the right software package.

He sees most products being offered on microcomputers, and he notes the Atlantic inflation in most. "It is odd to find a package where that has not happened," he says.

To be fair to software dealers, most gave good reasons for the price differences. And major microcomputer package publishing house Lifeboat actually bucks the trend, by faithfully converting dollar prices more or less directly into pounds.

The higher cost of US-written software is something which affects the microcomputer package market, almost exclusively, with minicomputer or mainframe software either being bundled in with the complete system, or being sold as a very different "charge by use" licence fees.

And it is not just software, but US hardware which also gains a few pounds when it comes to the UK.

There are three kinds of pricing approach for the consumer-oriented microcomputer package, and all three stem from the fact that the end-user buys software as if it actually were the record which floppy disc holding the product resembles.

But with applications packages costing from a few hundred pounds, to several thousands, the user is getting considerably more for this tune than hard-pressed

record companies!

A growing number of this country's software distributors begin by flying out to America, to find a package to sell. Marketing Micro Software (MMS) of Ipswich went straight to the experts for its US package.

Rex Ratoff, the company's finance director said it got the Tool Kit (TK) Solver software from Software Arts, the same group of people who wrote the big-seller VisiCalc. MMS negotiated what Ratoff calls "a very good price" with Software Arts, and is the first European distributor for the package.

Ratoff agrees that charging the same sterling as dollar price "does seem to be the accepted thing in the trade." But his explanation — a generalised view, and not limited to MMS itself — is that American software authors "don't understand the UK, or European distribution syndrome at all."

"Most US software authors are not very export oriented, in fact I would say that they are frightened to death of exporting," he says. "We have this image of the American entrepreneur who grabs the world by the scruff of the neck, but it's not true."

"In fact they are computer buffs, most of whom think more easily in programming languages. They write some package and find that sales come very easily — they have a massive market right in front of them."

"Sales of a microcomputer software package might literally go on forever for a product in America. If they do think of Europe at all, it is as if it were another state, maybe Texas. Software authors producing the world's best packages are in fact naive about selling it abroad. We have to go to them, a hint of trouble and they don't want to know."

With the first approach to pricing the floppy disc and its associated documentation is wholesaled just like no LP or single. The UK distributor thinks he or she has spotted a potential hit, so a dealership with the US software author is arranged.

Ratoff has applied his training as

Products from the US can show big price hikes as the \$ sign changes to a £. But this doesn't mean every dealer is "on the make".

an accountant to the pricing chain, which goes as follows. The American supplier is used to wholesaling thousands of floppy disc copies of the software through state-based distributors, giving them a 50% discount.

The state wholesaler takes his 10%-20% cut, and passes on the product to retailers — most probably a chain of retail shops — which take the other 30%-40% of discount on offer.

When faced with a UK distributor, the American supplier simply offers him the same wholesale deal. But before his package can be sold, 10%-15% freight and 6%-8% import duty is removed from the margin. To give UK shops the same 30% mark-up, our UK distributor is left with nothing.

"By the time we have put that microcomputer package into the shops — with a margin for taking the risk of stocking it, and VAT — we are left with nothing," says Ratoff.

So, what he calls the "logical, as well as simple solution" is for software distributors to treat dollar prices as if they were pounds.

With the exchange rate fluctuating between \$1.8 and \$1.5 to the pound, this gives distributors like MMS room to manoeuvre, and an incentive to winkle out new and often unknown packages from reluctant American software authors.

As a footnote, MMS claims, to sell TK Solver at a recommended retail price of £286, which is comparable with the US price of \$399. "So we are not in that syndrome

for TK Solver, but we have had to do it in the past where we didn't have quite such a good deal as the one we've got with Software Arts," Ratoff adds.

Because more and more people are becoming microcomputer package distributors for the first time, many are being forced to pass on costs associated with starting up business in the first place. Virgo sees this kind of price inflation, where "the new firm wants to generate a good cashflow very early on, to pay for advertising, good support staff, or even premises."

"If one of my customers wants to buy software, then he should be able to buy it at the same street price here as in New York. It seems like a fair thing to do."

With the second pricing approach, the software distributors pass on some of their fixed costs to first customers in what Virgo describes as "a very odd commercial equation."

But distributors often describe this type of margin, again directly equating dollar and sterling prices, as a buffer against other variables such as currency fluctuations.

Jim Duncan is technical manager of MOM Systems in Aberdeen, and he favours the "Buffer" explanation. MOM is relaunching its US-written Condor microcomputer database, which competes with Ashton Tate's big-selling dBase II package. He gives a salutary warning to those who would

equale dollar prices with pounds.

"If you did a direct translation of prices, you would probably end up losing money, taking the exchange rate at present of around \$1.60 to the pound. It is standard practice I know, but it very much depends on each circumstance," says Duncan.

MOM is selling Condor "far cheaper" than the US software author of the same name, because it managed to strike a good deal for this product. On sale in the UK for £285, the US price of \$650 is considerably higher.

Duncan says he has done direct

its current manageress is Helen Smith. Lifeboat is one of the few distributors of microcomputer packages to offer comparable prices on both sides of the Atlantic, with no strings.

"If one of my customers wants to buy software, then he should be able to buy it at the same street price here as in New York," says Smith.

Lifeboat is one of the world's largest software publishers, marketing packages for smaller firms. Lifeboat succeeds by being dependable, according to Smith. "We want to keep our prices stable. That means thinking ahead, and taking more trouble over things like currency fluctuations. If the exchange rate is \$1.80, we win, but if it drops to below about \$1.50, we're going to lose out."

On the whole microcomputer software consumers in this country are not getting ripped off, but neither are they getting the enviable deal of their American counterparts. The abundance of packages in the US means that distributors are needed, to transport it over the Atlantic.

In the course of that journey, there are costs. Profits must be made, or the distributor would not bother. There is the problem of who will support the software, and of the ever fluctuating exchange rate.

And like hardware, software goes through its price rises — getting cheaper as sales rise. So the mass marketing organisations are able to sell their like VisiCalc very cheaply, until something better comes along.

Virgo: Notes inflation in most imported packages.

Richard Veryard reports on the revolution in musical instruments

The latest sounds are strictly digital

ABOUT 200 years ago, music was transformed by the introduction of a new instrument — the piano. From Beethoven to the present day, most composers have been able to play the piano, and many have been virtuoso performers.

Since its invention, and particularly in the 19th century, the piano has dominated the history of music. Pieces intended for whole orchestras of string and wind instruments have been arranged for the piano. Before the days of radio and record players, every musician had one in the drawing room.

Attitudes towards harmony and tonality changed under the influence of the new instrument, so that even pieces for "traditional" instruments such as the violin or the human voice were written according to the new ideas of musical composition learned from playing the piano.

We are now seeing the emergence of a new musical instrument, which can be expected to dominate the musical world of the 21st century at least as much as the piano did in the 19th. That instrument is the computer.

How can a computer produce music? An ordinary digital processor can only output numbers. To convert these numbers into anything else — from a pattern of coloured dots on a screen to a new design of microchip — requires specialised hardware or software, or human effort.

Early attempts at computer music, for example by Iannis Xenakis in the 1950s, relied on human effort. The composer would write a program (usually including a random-number generator) which printed out tables of numbers. The composer would then have to transcribe this "stochastic structure" on to a musical score, which could then be played in the traditional manner by human performers.

This is, in effect, an up-to-date version of a technique used by Mozart, who is known to have thrown dice to decide upon a pattern of notes. The disadvantages in this method of working are obvious: it

was laborious and error-prone. The advantage, besides simplicity, is that the composer has the opportunity to adjust the output to achieve a more aesthetically pleasing result.

A computer can of course do more than merely serve as an expensive roulette wheel or set of dice. If the algorithm for getting the notes from the numbers can be coded in a high-level language, the computer should be able to print the musical score directly. Several systems are available to do this, including the Synclavier and the Apple Soundchaser.

New opportunities for the application of computers in music have arisen from the replacement of analogue recording techniques by digital recording. Not only professional studios but many hi-fi fanatics as well have equipped themselves with digital tape-recorders.

A unit can be bought for a few hundred pounds to convert a Beta-max video-recorder into a digital tape-recorder, and digital discs

Fairlight systems have been installed in a handful of university music departments in the UK, but the main market is in the rock music industry. Many rock stars possess a machine

give a far higher sound quality than ordinary LPs. Instead of representing sound as a magnetic waveform, it can be stored by sampling the amplitude of the waveform at small intervals, typically at a rate of 30K-50K per second.

Besides being used to process this sound, a computer can generate sound from scratch by calculating the amplitude numbers mathematically. This is known as direct digital synthesis.

If a computer is to produce sound real time (or "live"), it must be able to calculate the numbers that represent the sound at a faster rate than the sampling rate. Since the programs involve a lot of heavy number-crunching, this was not possible in the early days of direct digital synthesis, and the sound

was generated in two passes.

First the program would be run to calculate the amplitude numbers. This would typically take several minutes of CPU time for only a few seconds of output sound. Then the numbers would be retrieved in a second pass and fed through a digital-to-analogue converter to a loudspeaker.

In the last few years, improved hardware and software have made these two passes unnecessary, and the synthesis can be carried out live.

There are two main mathematical methods for calculating the waveform. The first method, used in programs written at Bell Labs and MIT in the 1950s and 1960s, involves the theory of Fourier Analysis.

A sound is broken down into its harmonic components, which are simple sine waves. These are then added together, using Fourier Transformation, to produce the wanted sound. This is known as additive synthesis. It relies on a

without anyone having to crash a plane in order to record the sound. Iram has teamed up with Sogitec, a French industrial simulation firm, to sell the 4X real time digital signal processor, for such industrial applications and for musical composition.

In the systems described so far, the computer output is a digital representation of the sound. This can be converted into voltage fluctuations, which can then be smoothed, amplified and played through a loudspeaker. Several hybrid systems have been developed in which the computer output is used to control some other device. A pipe organ can be played by a computer by wiring the computer to electric motors fitted to the valves of the organ.

A more common form of hybrid system includes a computer and a synthesizer. The voltage-controlled synthesizer was invented by Robert Moog in the mid-1960s, and has been used by rock musicians for over a decade. It may be controlled by hand using a panel of patch cords (like an old-fashioned telephone switchboard), knobs and switches. These control and combine the various components of the synthesizer, which include oscillators, filters, voltage-controlled amplifiers, mixers, voltage processors, trigger generators, ring modulators, envelope generators and a sequencer.

All these can of course be controlled by computer instead of by hand. The BMS studio in Stockholm contains one of the most sophisticated examples of this type of analogue hybrid system. The Moog synthesizer is an analogue device; it processes data in the form of voltages. The digital hybrid system can be much more efficient for generating simple sounds than a direct system. As would be expected, it achieves this at a cost of limiting the scope and flexibility, but not to an extent that affects many users.

The Fairlight CMI, invented by Australians Kim Ryrie and Peter Vogel, is a good example of a digital hybrid system. It combines familiar units of hardware and software (general-purpose processor with basic compiler, floppy discs, VDU and light-pen and typewriter keyboard) with specially designed software and peripherals, including eight digital synthesizers (to provide eight-track sound output) and a six-octave piano keyboard.

KATE BUSH... Has used the Fairlight system on recordings.

Fairlight systems have been installed in a handful of university music departments in the UK, but the main market is in the rock music industry. Many rock stars possess a machine; among those who acknowledge it are Kate Bush and Alan Parsons.

The Fairlight system is designed to construct pieces of music from single synthesized notes. A note can be generated from scratch, using additive synthesis as described above. Alternatively, the system allows sounds to be input through a microphone which samples it and converts it to a digital representation for manipulation by the computer.

Once stored on disc, the sound can be edited and modified. The characteristics of the sound — pitch, duration, attack, damping, vibrato — are treated as independent parameters that can be varied one-by-one. These sounds are the raw material for pieces of music; the composer builds melodies and accompaniment from these notes as if they were Lego bricks.

They can be strung together in up to eight independent "voices", either by writing programs in the interpreted language MCL or by playing the required sequence of notes on the piano keyboard.

The piano keyboard can be used live, calling up raw sounds input beforehand. Rock musicians who can't play the piano, not even with two fingers, are provided with a guitar interface.

A composer can thus assemble anything, from repetitive backing tracks to entire pieces of film or serious music, using a very few basic sounds input. A single bass-guitar note can be played into the sampling microphone and stored on floppy disc. The computer analyses this note and allows each characteristic to be altered until the right "shape" is achieved.

Small variations in pitch, timbre and duration leave notes still recognisable as bass-guitar notes. By stringing together these different modifications of the original note, the whole bass-guitar track can be laid down. It will probably be more accurate than a real musician could have played it.

When the parameters are varied more widely, sounds are produced which are no longer recognisable as bass-guitar notes, and which could not be played by any guitarist, however virtuous.

Alejandro Vinas is a composer who works in the electronic music studio at City University. His recent piece *Hendrix Haze*, inspired by the musical features of Jimi Hendrix, was mostly composed on the university's Fairlight system, but the limitations of that system forced him to complete the piece in the BMS studio in Stockholm. The piece contrasts two ap-

proaches to computer music: composing *with* notes and composing *inside* notes. The Fairlight system is quite good at composing *with* notes, in other words treating notes as atoms from which the music is assembled, much as an organic chemist would string atoms together to make complex polymers.

It is not so good for the composer who wants to shape notes from the inside (equivalent in analogy to subatomic physics). A composer often wants a single note, lasting several seconds, to vary its characteristics while it is being played. The most obvious example is a glissando, where a note changes its pitch from beginning to end.

The City team has developed a technique of using a second output voice to control the parameters of the first; this technique provides a roundabout way of sliding pitch or vibrato within a single note, but this technique was not powerful enough for Vinas.

It may be deduced from what has been said so far that computer music has some way to go before it establishes itself fully in the mainstream of musical life.

In the first stage of computer music development, the computer carried out instructions laid down in advance in order to generate music in advance. We are now in the second stage of development, where at least music can be generated in real time.

In a couple of years we can expect to see the composer controlling all aspects of the music with real time input during a live concert. This will allow jazz musicians to play on the computer, or on computer-analysed instruments, in free improvisations.

The problems to be solved before we reach this third, mature stage of development are many and conceptual. How is the musician to control the computer? He must be given the freedom to follow his musical intellect or instinct. He must be given the maximum expressive power. How is he to be given this freedom, this power, without the system becoming too complicated to use properly?

The research continues on several other fronts. Enhancement of processor speed will allow yet more number-crunching to be done live. The computer is being used as a musical instrument (if we include hybrid systems) allowing parallel processing, which will allow it to become truly stereophonic. Hendrix Haze by Alejandro Vinas, together with computer compositions by Richard Azzie and others, will be played at the Almeida Theatre, Tinsford, London on Sunday, August 14 at 8pm, and will be released as a record on the Digital Arts label.

A custom-tailored High-Tech Building in Maidenhead

● 25,000 sq. ft. total - 10,500 sq. ft. OFFICES

● A unique opportunity to house self-contained, custom-built research and development facilities with offices, under one roof

● Parking for 100 cars on site

● Available on a freehold or a leasehold basis

Legal & General's Anne Bragg... two first places and victory in the women's individual.

Paul Whyte... best performance in the shot.

Gill May heads for home in the relay.

The victorious Kalamazoo ladies look happy with their success.

Heywood and Kalamazoo triumph by narrow margins

AFTER basking in the sun at the regional heats, Computastars finalists and officials were treated to a deluge of truly Manxian proportions, albeit at Birmingham. The sudden stars splashed their way through the morning's events with commendable courage and a large number of umbrellas.

A vital adjunct for the first event, the shot, was a dry towel to dry off the slippery sphere. A throw of well over 16 metres by Paul Whyte of the London Borough of Lambeth, coupled with good performances from the rest of the team, saw Lambeth take an early lead.

Best performance by a number one came from Vernon Turner, of Bank of America, beating Steve Skelton from Harley Cooper into second place.

Kalamazoo's women started well, taking first place in the first three events. Case was runner-up to Kalamazoo in the shot, while Ailsa White, of Centre-File, took the first of four individual victories, beating Anne Bragg of Legal & General and Janet Carter of Rowntree Macintosh into joint second.

The hockey dribbling was made doubly difficult by the slippery conditions, with the earlier teams perhaps at an advantage as the course became more treacherous as the event went on. But it was one of the last teams to go, British Shoe Corporation, which triumphed over adversity, with number one Phillip King putting in a particularly good time to take the individual title.

Kalamazoo's women won what do they need them on? - but it was Centre-File champion Ailsa White who again took the

individual title, this time beating Janet Carter by three points. Next came underwater netball - well, pretty wet netball anyway. Best male performances came from Rowntree Macintosh: 1's team and Commercial Union number one Graham King.

Yes, it was Kalamazoo's ladies in the driving seat yet again, and Ailsa White taking the individual. In an unusually kindly act, competition organiser Gordon Cairns decided that the track was too wet for the sit ups, and postponed the event until later. Therefore, the team sprints were brought forward from the afternoon.

A considerably shorter course than before meant more sprints were possible in the allotted time, and a commensurately higher number of starts meant a more using event, thus dispelling any thoughts that the organiser was getting soft.

Legal & General's women's team splashed its way to first place in the sprints, with a three-way tie for second place between Kalamazoo, Barclays, and Commercial Union. Legal & General number one Anne Bragg took her first victory of the day, and another three champions, Alison Grant, Liz Porter and Sonia Turner, tied for second.

At the break, Kalamazoo led Legal & General by 134 points to 114, with Barclays one point behind. Ailsa White was in the lead by a single point over Anne Bragg, Alison Grant was third, eight points adrift.

Best male sprinters proved to be Heywood and Crawford, tying for first place, with their respective number ones, Bill Edwards and

Geoff Clarke's attempt to regain the record for sit ups failed by just one.

Phil Wright... UK champion.

How the events were won

Robert Hurst, duplicating the situation in the individual competition, and no gain from his team mates either at the best Barclays by a two-point margin.

Best female dribblers turned out to be from Legal & General, with Centre-File number one Ailsa White taking her fourth individual victory of the day, making her the most successful female in terms of first places.

And so to the final event - the return, by popular demand, of the steeplechase. Kalamazoo 1's juncture was a mere two points behind Heywood, and a good performance in the steeplechase could bring them victory.

They did indeed turn in a good performance, winning the event and collecting 38 points to their pains. But Heywood proved to be almost as rapid over the course, finishing a close second with 37 points.

The best combined male and female performance came from Kalamazoo, with Barclays second and Commercial Union third.

In the ever-popular Computastars, it was the lovely lady from Thorn-EMI who swept the Inland Revenue men off their feet on the charged-up turf of the Alexander Stadium.

A sad note to end with. Gordon Cairns has not as yet secured a sponsor for the overall European final which brings in Belgium and Holland.

Several potential sponsors have dropped out at the last minute and if no one comes forward by Friday, August 19, there will be no contest on Sunday, September 18.

If you feel your firm can help, in return for the publicity and copious amounts of goodwill, get in touch with Gordon Cairns on 01-688 6690, quickly.

There was not much in it in the women's competition either. Kalamazoo took second place in the steeplechase, while Legal & General, which finished with 255 and 251 points

respectively. Barclays took the bronze.

Anne Bragg of Legal & General turned in the best time in the individual championship by a 19-point margin over Ailsa White, with Alison Grant third.

Best small unit was Harley Cooper, finishing a creditable 14th overall.

The old-timers from Scottish Widows took a veteran title with 22nd overall.

14-inch disc drives
Why pay more than is fair
for a small repair?

Control Data do not operate a fixed price repair scheme for 14-inch disk drives—because we think it's unfair that people who look after their units should have to subsidise those who don't. Instead, we'll give you a quote within 24 hours for any repair to the following units:
CMD 9448 • MMD 9730 • SMD 976X • Hawk 9427H
We'll collect and deliver for £50 round-trip, and guarantee to return your unit, in full working order, within 15 days—or considerably faster if your need is urgent.

WOLVERHAMPTON METROPOLITAN BOROUGH COUNCIL
Wulfrun College of Further Education

TENDER FOR COMPUTER EQUIPMENT

Tenders are invited for the supply and implementation of some of the following:

- An eight work station CAD system comprising of designer 1 on 800 computers.
- Nine Pet Commodore 8080 dual disc drive units with 800 KB of storage capacity.
- Nine 80/120 Column matrix printers suitable for use with pet computers 8032 with dual disc drives model 8060 complete with connecting cable.
- Three Pet Commodore 8032 Micro computers with 32KB RAM.
- Ten 64KB RAM 2 80A Processor Boards for the upgrade of Pet Commodore 8032 Micro computers. The machine should then have 96KB RAM for use as on the pet commodore operating system.
- Five 64KB 2 80A for MHz 80 column 24 line VDU display microcomputers with twin disc drives, serial and parallel ports should be provided. The machine should be capable of using the CP/M operating system.
- Two 80/120 column matrix printers.
- Two printer cables for the connection of the printers to item 6).
- For computer numerically controlled bench training lathe suitable in absolute or incremental programming.

Forms of tender may be obtained from and are returnable to the Administrative Officer, Wulfrun College of Further Education, Wulfrun College, Wulfrun Way, Wolverhampton WV8 8DU not later than Monday, 15th August, at 12 noon. The Council is not bound to accept the lowest or any tender.

Analyst/Programmers

Datapoint or Mini Experience
£8-13,000

Staines

DATAPOINT SUPPORT SPECIALISTS

LS2 is the UK's leading specialist Datapoint Software House. Our planned expansion of systems development activities has created vacancies for 3 additional analyst programmers.

We offer varied and interesting work covering a wide range of industries, above average salary, paid overtime, non-contributory pension scheme, free medical insurance, in a happy youthful office atmosphere.

We are looking for people with a minimum of two years programming experience on minicomputers. Interested - then call Knight on 01-491 4706 for further information and an early interview quoting Ref RC315.

Software Development Programmers

Central London

to £13,000

Our client is one of the leading microcomputer based software houses in the UK. Their specialisation is in the design and marketing of business accounting systems and Financial packages covering a broad spectrum of CP/M based systems.

In line with the continuous growth of the microcomputer marketplace, our client is expanding and now seeks to recruit two additional Programmers. Ideally you will have mini or micro programming experience in BASIC with a knowledge of accounting packages or PASCAL programming with exposure to the development of Financial

Planning and Database systems.

If successful, you will have the scope to utilise your creative skills in the design and programming of first class quality products and work within a small, friendly but professional environment.

For further information and an early interview please call Knight on 01-491 4706 quoting Ref YY130.

£20,000-£27,000 Tax Free + Flights + Accommodation

The Benefits

- * Flights home every 4 months with two weeks paid leave.
- * Free private accommodation.
- * Free food on site and food allowance.
- * All services and laundry cleaning provided.
- * Recreational facilities.
- * Personal banking facilities.
- * Private and business transport.
- * Medical and salary insurance.
- * All visas and flights arranged for you.

The Conditions

You will be employed by our Saudi Arabian partner with housing and all facilities provided on site. Transport will be provided to and from our client, a major oil company, whose working conditions are among the best in the Middle East with modern air conditioned offices. You will work at one of the largest computer sites in the world using the most up to date IBM hardware and software.

This contract offers an unparalleled opportunity to advance your career whilst saving the majority of your salary with no taxes or living expenses to pay.

This represents a once in a lifetime opportunity to make your future financially secure. Find out more - contact Neil Williams on 01-491 4706 or 01-845 4945 (evenings and weekends).

IBM System 34 Prog & Analyst/Programmer

Nottingham

c. £8,000 and c. £9,500

Bell Fruit (UK) Ltd is a successful service company within the leisure industry.

The company is currently installing a large distributed processing network of IBM System 34's supporting an information processing system for five locations throughout the UK.

The Data Processing department employs a small specialist development team who provide an efficient and professional service.

To continue their policy of expansion, Bell Fruit is seeking additional staff with a sound knowledge of IBM GSD systems.

The programmer will have at least two years programming experience, preferably RPGII.

although training will be given if necessary.

The Analyst/Programmer will demonstrate good communication and analysis skills with a knowledge of RPGII. Some UK travel involved.

You will be offered a salary commensurate with your qualifications and you will be working in a first class working environment.

Find out more - phone now on 01-491 4706, quoting Ref GK602.

BELL-FRUIT (U.K.) LIMITED

Systems Designers, Project Leader (IBM Installation)

London

to £15,500

Our client is a multinational Telecommunications organisation with affiliates located throughout the major business centres of the world.

Their computer installations comprise advanced data processing technology supporting a variety of commercial and management information systems.

The SYSTEMS DESIGNERS will have some on-line Design experience gained in a IBM mainframe or 8100 installation. A programming background in COBOL using structured techniques is an advantage, but not mandatory.

The PROJECT LEADER should be able to demonstrate good communication skills,

supervisory experience in a development role and Senior Management liaison. A background in Designing systems in an IBM mainframe or 8100 installation is desirable.

The opportunities for career progression and international travel are excellent and successful candidates will be offered an attractive benefits package in addition to a highly competitive salary.

Find out more - contact Knight on 01-491 4706 quoting Ref GK603.

A NEW COMPANY WITH 15 YEARS OF ACHIEVEMENT

FORTAN ANALYST/PROGRAMMERS TO £12,000 pa CAMBRIDGE

CADCentre Limited is an exciting new company which has evolved from one of the most respected CAD/CAM development organisations in the country. With Government support, the Company has been restructured and, backed by three major British Companies, CADCentre Limited is poised to attack the CAD/CAM market from the secure base of on-going contracts. Their engineering design and graphics products already lead the field.

Existing commitments to refine and extend these products, and also to develop further equally

successful software, have created the need for a number of skilled Analyst/Programmers.

The successful applicants will have either a Degree or HND in an Engineering, Computer Science or Mathematics discipline together with the ability to produce accurate results quickly in FORTRAN. However we are not seeking just Programmers, we need problem solvers with the ability to communicate with users, identify the requirement and then "stick with it" until the solution is found. Although a team structure exists a high level of flexibility and self motivation are sought after assets.

CADCentre Limited

The modern offices are set in a rural location on the outskirts of Cambridge. The University City has excellent shopping, sports and cultural facilities with housing at reasonable prices both in the City and the surrounding villages. Communications are excellent with easy access to the East Coast, The Midlands and London.

Salaries of up to £12,000 pa, flexible working hours and relocation assistance (where appropriate) will make moving to Cambridge easy and enable you to enjoy the lifestyle that CADCentre, the City and the countryside can offer.

So if you want to develop your career in a dynamic new company with a secure future in the growing market of CAD/CAM, telephone or return the coupon below and we will send you an Application Form and full Company Profile.

Please send an Application Form and Company Profile to:

RJB MANPOWER SERVICES LTD.

FREEPOST 24, London W1E 5JZ

Telephone: 01-439 8591 (24 hour answerphone)

Minicomputer Design

there is no more exciting project

up to £15,000 pa

At a rural location in England, a team of highly skilled professionals is working on one of the most advanced minicomputer systems in the world. They are using several DEC/VAX computers on all prototype work.

The team is part of a company that boasts a strong growth pattern and which has a dominating position in its chosen field. The company now has over 100 R&D staff, backed by a committed management and a solid financial base with an

annual turnover per employee nearly twice the industry average. It has a record of exceedingly interesting technical advances.

The company will pay the best in order to attract the best, and also offers free BUPA, a pension scheme, regular salary reviews and relocation assistance to an attractive part of the country.

COMMISSIONING/TEST ENGINEERS

Having proven the first prototype of the new system, the next few copies are about to be made. A number of Engineers are required to commission these preproduction units and later to deal with Pilot Production.

Your experience must have been gained over two or more years, and should include TTL logic, bit slice or microprocessor devices, disc subsystems and familiarity with a wide range of test equipment.

FIRMWARE DESIGN ENGINEERS

Currently this section is applying 16-bit microcomputers to device controller applications. Experience in firmware using high or low level languages is vital as is familiarity with Intel microprocessors. Preference will be given if you have experience of intelligent terminal design and/or communications controller design on commercial projects.

SOFTWARE DESIGNERS/PROGRAMMERS

The software teams are currently designing and developing the whole range of software for the multi processor system. This includes at the lower level, system build, configuration and executive support. In addition they are implementing relational database and data dictionary managers, a very high level programming language and a sophisticated user interface.

They need people with systems programming experience in any of the following areas: executive support, filing systems, report generators, compilers and graphics.

Systems programmers with experience in other areas will be considered for these positions.

VAX SUPPORT SYSTEMS PROGRAMMERS

This group supplies system development tools to the other groups. Skills required are a detailed knowledge of DEC equipment, ideally VAX under VMS with VAX Macro experience, and fluency in a high level language such as C or BCPL.

This is a unique chance to combine technical challenge with the opportunity for professional advancement in one of the fastest growing computer companies in the world.

In some areas there is potential for rapid promotion to Team Leader.

For an informal discussion, please phone John Clifford on 01-248 3913.

Alternatively write enclosing a full CV, identifying the appointment of interest and giving a contact phone number. As applications will be forwarded directly to our client, you should list separately any companies to whom your details are not to be sent. Please quote reference 1195/CW on both letter and envelope.

TECHNICAL AUTHOR COMPUTER SOFTWARE

BERKS.

Circ. £13K

Our client, an international minicomputer manufacturer, is seeking to employ a Technical Author for their "state of the art" product range. These include; a high performance transaction processor, database management system, computer networking packages, systems resilience software and some related application packages.

Responsibilities will include reviewing the technical function specifications of new software products with the development teams, writing end user overview and operation manuals for the products, and reviewing these manuals with selected management.

Ideally applicants will have:

- Minimum 5 years experience in technical authorship and/or software systems and programming.
- Proven interpersonal communications skills.
- Excellent command of written English.

In return you will enjoy an interesting position with one of the worlds most prominent mini computer manufacturers.

For further details, please phone Keith Taylor at our Reading Office, or write enclosing a full C.V.

Applications are invited by the Police Authority for Northern Ireland from men and women not more than 55 years of age on 11 August 1983 for the posts of:

SYSTEMS ANALYST/PROGRAMMER ANALYST

Required for work in the Royal Ulster Constabulary's Computer Services Branch. Duties will include:

- (i) Development, installation and enhancement of mini computer systems for administrative and operational requirements.
- (ii) Assisting in the operation and maintenance of such systems.

SYSTEMS ANALYST
(Salary Scale £8,166-£10,218)

Applicants must have either a minimum of 5 years experience or at least 4 years experience plus a degree, HND or equivalent qualification in computer science, engineering, mathematics or other allied discipline.

PROGRAMMER ANALYST
(Salary Scale £6,819-£8,717)

Applicants must have either a minimum of 3 years relevant computing experience or at least 2 years experience plus a degree, HND or equivalent qualification as above.

Grading and starting salary will be related to qualifications and experience. Allowance may also be made for relevant post graduate experience.

Non-contributory pension scheme (apart from a deduction of 1 1/2% towards provision of widow's pension in the case of male officers).

22 days leave per year in addition to public holidays.

The Authority may decide to interview only those applicants who appear from the information available including qualifications, duration and extent of previous experience, to be best suited for the post.

Application forms which must be returned not later than 11 August 1983 and conditions of service are obtainable from Recruitment Section (Telephone Belfast 230111, Ext 242 and 271).

Sales Executives

Anadex Ltd., the leading peripherals printer manufacturer, is expanding its UK sales organisation and has immediate vacancies for two experienced peripheral Sales Executives to cover the South of England and the Midlands/North area of the UK.

These two key additions to the Sales Department will be required to expand printer sales through a vigorous and well-established Distributor network and also by direct sales to key accounts.

The ideal candidates will be successful sales people with at least 3 years experience in the UK peripherals marketplace. A sound technical background and familiarity with the end user/distributor business environment are also essential. Preferred age is 25-35 years; ideal locations would be West of London for the Southern Area position and the Birmingham/Manchester region for the Midlands/North position.

These are key appointments within a sound and rapidly expanding company and will play a vital role in the success of new products currently under development.

A good basic salary will be offered with OTE packages around £20 K. A company car and usual large company benefits will be included.

Please apply in writing to the address below or call Peter Brown for further details.

We need sharp incisive minds for Telecommunications Development c£12,000 - £20,000 p.a.

It takes sharp incisive minds to keep a company at the forefront of technology.

Correspondingly, only a keen appreciation of career aspirations will satisfy such minds.

For this kind of individual this company has an exceptional offer:

- ★ A senior design and development role within a highly advanced telecommunications company.
- ★ Unlimited opportunity to use your innovative skills and satisfy your management potential.
- ★ Work with a highly professional team of software engineers on one of the world's most comprehensive integrated telephony systems.
- ★ Utilise your experience of any high level languages within an environment which emphasises rigorous design methodologies.
- ★ Work on Intel 8086, IBM 370 and VAX 11/780.

A competitive salary is complemented by a generous benefits package and excellent relocation assistance where appropriate.

If you are seeking constant technical challenge and are willing to accept responsibility telephone:

Marc Zundel on 01-938-1804 (24 hours)
or 01-602-0685 (between 7.30pm - 8.30pm)
or write to us with full career details.

SENIOR PROGRAMMER VAX & PDP

BASIC + / + 2

£9K to £11K

City of London

Rolfe & Nolan Computer Services plc, is one of Europe's fastest-growing timesharing bureaux. Since formation in 1974, they have grown at a rate well in excess of 100% pa, and now offer a comprehensive range of services on a sophisticated DEC network supporting over 100 on-line customers and comprising:

2 x VAX 11/750; 5 x PDP 11/70; PDP 11/44.

To play a vital role in the development of new VAX-based systems for the financial sector, they now seek an ambitious young professional with at least 2 years experience of commercial programming in BASIC + or BASIC + 2 on DEC hardware using VMS, RSTS/E or RSX.

You will be involved in all aspects of the design and programming of advanced systems using the very latest DEC hardware and software.

You will enjoy excellent career progression in a rapidly expanding organisation wherein promotion is both rapid and based strictly on merit.

To arrange an early interview in London, contact Barry Latchford on the number below up to 7pm, or on Newick (082 672) 3197 evenings and weekends, or send a brief CV quoting Ref 685.

Burroughs large system computers in Bristol.

Clerical Medical, a leading life assurance society, has a record of sustained growth and a reputation for quality, integrity and service.

We are currently engaged on a programme of computer development using on-line updating and database techniques. Our existing equipment is being replaced by Burroughs large system computers.

Bristol is a thriving financial centre and the location of our head office and data processing group. Situated in the West Country we are surrounded by beautiful countryside and within easy reach of the historic city of Bath and the Cotswolds. Bristol offers an attractive life style and a variety of cultural interests including theatres, concert halls and an arts centre.

DATABASE DESIGNER

to £13,000 plus benefits

Reporting to the Software Manager, you will be at the forefront of new developments and will be responsible for the physical design and subsequent monitoring and optimisation of the company's databases.

Approximately 5 years' experience of software work is required, of which a significant proportion will have involved database design and performance. Knowledge of Burroughs Large System Computers and DMSII would be an advantage.

Benefits

- preferential mortgage terms
- relocation assistance if appropriate
- non-contributory pension scheme

SYSTEMS ANALYST

to £11,000 plus benefits

You will work in a project team on the development of new systems from investigation to implementation. 4/5 years' systems experience is required and preferably you will have experience of:

- working in a financial organisation
- actuarial systems
- structured systems techniques

- subsidised staff restaurant
- social and sports club
- flexible working hours

For more information, telephone Mike Eustace, Technical Services Manager on Bristol (0272) 290566.

Alternatively send full career details to: Mrs. Jill Adams, Personnel Officer, Clerical Medical and General Assurance Society, Narrow Plain, Bristol BS2 0JH.

International Data Centre and world-wide Telecommunications

Our Client, based in a pleasant environment close by the M1 just north of London, continues to make impressive advances within its field. The Company has a wide range of IBM and other vendor computer equipment processing on-line and batch systems for its operating divisions and subsidiaries across UK and Europe and has telecommunications links to the U.S.A., Africa and Australasia. A thorough appraisal regarding future strategy has recently been completed resulting in requirements for a number of dedicated computer professionals. Serious career oriented men and women will want to examine the outstanding opportunities this organisation can offer. A number of these positions involve international travel.

SYSTEMS SOFTWARE & SUPPORT Systems Programmer c.£14,000 Senior D.P. Specialist up to £12,000 APL Specialist up to £12,000

Three vacancies are on offer. Firstly there is a requirement for a Systems Programmer who has considerable experience of working in an IBM mainframe environment on a range of software which includes MVS/SP, JES3, RACF, ACFTVTAM, IMS DB/DC, Roscoe, and TSO. Quote ref. CW 735

Secondly, they require a D.P. Specialist for an interactive support role, who is fully conversant with all areas of IBM software. To advise customers on how best to maximise the efficiency and scope of the system including security, maintenance of software products, planning user requirements etc. Quote ref. CW 734

An essential part of both of these jobs is short-term European travel; therefore a high element of self-motivation and personal commitment to achieve company objectives will be required. Finally, there is a position calling for an APL Specialist. This person will support a variety of software and user requirements. Previous bureaux experience would be most appropriate. Quote ref. CW 736

Capacity Planning Specialist up to £14,000

Forecasting user computer demands and utilising modelling techniques to interpret requirements for component upgrades calls for a very specialist skill. The company has recently installed the latest CMF package for capacity planning purposes. Knowledge and experience of IBM hardware and software is essential. The ability to use modelling tools and techniques, inquiry facilities such as API, SAS and Easytrieve would be desirable. A high degree of initiative and inventiveness, working without supervision is required. Close liaison with customers in the development of workload forecasts, offering them advice on updates in the rapidly changing DP environment will be very important. This will necessitate European visits. Quote ref. CW 739

Standards Co-ordinator up to £12,000

This is a newly created position. It requires self-motivation and the ability to initiate and co-ordinate activities in a multi-disciplined and internationally based operational and technology support environment. Success in the job will be measured by the general acceptance of and adherence by users to the technical standards and procedures put in place by the applicant.

You will be responsible for reviewing the existing technical documentation, standards and procedures and rationalising all documentation into user guides and manuals. Computer technical writing or broad IBM operational experience in mainframes or telecommunications should enable you to co-ordinate the information necessary to formulate standards and procedures and to communicate them to users in clear concise written English. In fact you would be required to act as the focal point for all matters relating to computing and telecommunication standards and procedures. You would also be responsible for assisting with implementation and for auditing compliance with these standards. Knowledge of at least one of the following is essential:

- * IBM MVS/SP
- * Roscoe or IMS or TSO
- * COBOL
- * JCL
- * Broad IBM operational experience including fault diagnostics, recovery procedures and remedial analysis.

As much of the operational information required for this job resides on API data bases, a working knowledge of API is highly desirable. Quote ref. CW 740

All the above call for a good standard of education, although solid experience in the respective fields and good communication skills will be prime requisites.

The company operates a full training programme. Benefits include free life insurance, BUPA, subsidised restaurant facilities etc. In appropriate circumstances a comprehensive relocation package can be made available. Act now by sending a comprehensive career resume or telephone for an application form in strict confidence quoting the appropriate reference number. You may mention companies to which your application should not be forwarded. Ray Diamond,

GERRARDS
Gerrard Recruitment Services

37 Chapel Side, Moscow Road, London W2 4LJ. Tel. 01-221 3348.

NETWORK RELATED VACANCIES

Great reliance is placed on international telecommunications systems within the organisation. This comprises a private data network providing batch, interactive and teletype access to mainframe computers, a speech network and message transmission network.

These should be well planned, cost effective with high availability and meet the business needs of customers.

Network Planning Specialist c.£11,500

The person we seek will assist in the planning, evaluation and control function, to ensure that capacity and topology matches evolving traffic patterns and that the benefits of modern technology are identified and secured. An analytical approach to problem solving and practical familiarity with telecommunications equipment and practices will be essential. Some European travel will be involved. Quote ref. CW 737

Network Engineer c.£10,500

Specifically to install, commission and trouble-shoot a range of equipment including modems, statistical multiplexers and switching modules throughout the UK and Europe. An understanding of data communications at an operational and technical level is essential. Familiarity with the technology of voice and message systems would be a distinct advantage. Documentation skills and practical experience are sought as client regards both as essential. Quote ref. CW 738

OPERATORS

Personnel are required to further strengthen the highly professional Operations Unit. This installation currently utilises an IBM 3083, 4341 and an AMDAHL V8 running MVS/JES, VTAM, IMS, TSO and ROSCOE with an extensive telecommunications network.

Shift Supervisors c.£8,200

+ shift allowance

Shift Supervisors should have IBM MVS Operations experience, at least 2 years in a supervisory role and a thorough working knowledge of JCL, utilities and teleprocessing, together with an effective operating knowledge of interactive systems, especially IMS. Their role will be to ensure integrity of system and user data, handle user enquiries, diagnose, refer or solve system and user problems, monitor and report on hardware and teleprocessing systems, and supervise a team of operations personnel. Because of shift working, own transport will be necessary. Quote ref. CW 743

Senior Console Operator c.£7,000

+ shift allowance

For this post IMS on-line (particularly Master Console) experience is essential. Applicants should have had considerable IBM MVS operations experience, display a mature outlook and have their own transport. Duties will involve working closely with a Shift Supervisor to ensure a high level of availability and responsiveness to the processing needs of our client's user community. Quote ref. CW 742

Network Administrator c.£7,000

Voice and Message Systems Management Services seeks an experienced Co-ordinator. Ideal for someone with experience gained in a large commercial or PTT telephone exchange or communications centre seeking a career in the international telecommunications network field.

Duties will involve co-ordinating administrative activities associated with all network services including test procedures, fault control and traffic analysis costs and records, billings, directories and operating the computer based network real time status system to measure traffic on the voice system. Quote ref. CW 741

ANALYST/PROGRAMMER

This international pharmaceutical company are currently developing major new On-Line commercial systems on their large IBM mainframe. You can help if you have a strong COBOL/CICS, PLI background, preferably gained in a DOB/VSE environment. This is a great opportunity to grow with a rapidly expanding department. Benefits include THREE salary reviews per year, relocation expenses where applicable and a family BUPA.

ADF - IMS DB/DC

ANALYST/PROGRAMMER/DESIGNERS

One of the world's leading engineering consultancies urgently require additional professional expertise to supplement their already very experienced teams. If you have had some exposure to ADF in an IBM DB/DC or any other related environment, and would like the chance to grow with this company, call me, SIMON KENNEDY, now and I will discuss this unique opportunity with you.

DEVELOPMENT WORK

PROGRAMMERS PLUS

City-based company using DEC and VAX require knowledgeable BASIC, ++2 Programmers who could also be experienced in systems support or technical support. As candidates will be judged on their relative merit and practical experience we have been asked to alert any suitable candidates. You will need a degree or degree equivalent, a respectable output and an ambitious and confident attitude. This company offers good benefits and a most pleasant and friendly working atmosphere.

ANALYST PROGRAMMER

INSURANCE

A major insurance group require an additional member for their development team. We are looking for experience gained in a DOB/VSE, VISA, CICS-COBOL environment and the confidence to grow with a rapidly expanding department. Our clients offer every opportunity for advancement and training together with a range of benefits commensurate with a major employer.

ANALYST PROGRAMMERS

AND PROJECT LEADERS

Due to a policy of carefully controlled growth, these clients require a number of additional members of staff this year. They have been extremely successful in designing and installing systems based on the IBM QBC range and require some RPO experience (very much) together with a flexible, mature, and professional approach. Superb opportunities are offered, working with Blue-Chip customers.

FINANCIAL COMPANY

CICS TRAINING

This is not an idle promise FACT! This well-known bookkeeping company will train the right person in CICS if you have around two years' COBOL programming experience gained in a large IBM environment. Some exposure to On-Line systems would be an advantage but is not a pre-requisite. This is an exciting and useful area in which to work. Benefits include Assurance, Pension, Season Ticket Loan, etc. Please contact MARSHALL CLUGMAN at our London office.

HEALTHCARE SYSTEMS

PROGRAMMER

A developing company require a young and ambitious COBOL/BASIC programmer to complement an existing efficient team, based in the West End. Currently using DEC and VAX the candidate will need to be familiar with financial and payroll systems. A minimum of 18 months' experience is required. This is an exciting and useful area in which to work. Benefits include Assurance, Pension, Season Ticket Loan, etc. Please contact MARSHALL CLUGMAN at our London office.

OPPORTUNITIES IN PL/1

ALL LEVELS

We are continuing to take in a number of vacancies for people with PL/1 experience at all levels. Our client base includes COM-BULANCIA, INSURANCE, BANKS, INVESTMENT AND MANUFACTURING concerns based in the CITY, GREATER LONDON and all the HOME COUNTIES. If you need a change of scene contact: TARGA, immediately. MORTGAGE assistance is available in some cases.

GSD ANALYST/PROGRAMMER

OXFORD

A leading manufacturer in the light vehicle industry is seeking a mature Analyst Programmer for their new installation, with experience of RPO II on an IBM 334. Major developments are being undertaken in the area of manufacturing systems and we are looking for a sound Programmer with good analysis and communication skills. Relocation expenses will be considered.

ANALYST

COVENTRY

Our client is a leading Software House in the Midlands. Due to continued expansion they require to take on another support Analyst. You should be able to demonstrate good analysis experience of integrated Mini computer systems with some experience of BASIC however limited. Prospects with this company are excellent.

SOFTWARE HOUSE

BUTTON CALFIELD

A family business, this company is looking for an ambitious Programmer to join them. They are seeking a Programmer with DEC POP 11 or DEC VAX experience, preferably with knowledge of RSTS/E, though this is not essential. You should be able to demonstrate a sound knowledge of BASIC + 2 and have the ability to take on analysis roles in the future.

PROGRAMMER

COVENTRY

We are looking for several COBOL programmers with two years' experience. You should come from either a manufacturing environment or a Software House and have experience of integrated Mini computer systems. The company has an excellent working order book, and several fringe benefits are offered in addition to the salary.

For a discussion outside of office hours, phone 0787 290746 or 01-908 2812. Interviews regarding Midlands-based positions can be left on 021-622 3338.

Specialist Computer Recruitment Ltd

A new Company has recently been established to provide a Parts and Equipment distribution service to the worldwide customer base of one of the UK's leading manufacturing Organisations. The Company will operate on an autonomous basis with its own IBM computer facility supporting an extensive telecommunications network, and will initiate its own systems development plan to cater for the needs of the business.

A Management Team is being recruited to provide the impetus to this new venture and an exciting and challenging future is anticipated.

TECHNICAL SUPPORT MANAGER

This important position calls for a strong technical knowledge of IBM MVS environments together with database and telecomms exposure (ideally CICS/TOTAL/ENVIRON 1). Duties will include controlling a technical team covering Databases, Personal Computing, Operating Systems, and Telecomms Networks, as well as planning future technical enhancements to the installation. Experience will have been gained in Systems Programming or Technical Support, but candidates will need the ability to combine technical knowledge with effective man-management skills. Initially there will be periodic travel to a Northern site, but the new Computer Centre will be located in an attractive area to the South East of Birmingham.

An excellent salary will be paid, enhanced by 2 leased cars under a Management Car Plan, and medical cover through BUPA. Comprehensive relocation assistance will be available to this delightful area with easy access to the countryside of Warwickshire and Worcestershire.

To apply, please contact the Advising Consultant, Martin Stainthorpe, on 021-236 9781 (24 hour answering service) and submit a detailed c.v. to him at the Birmingham office of SCR.

(4781)

Computer Operations Senior Operations Analyst

This is your opportunity to join one of Britain's largest investment service organisations and to assist in the development of highly sophisticated computer operations.

With funds under management of some £1,700 million it is easy to understand the importance which we place on automated systems. In addition to the mainframe computers (two IBM 4341 MG 2) we have established telecommunications links to 20 remote locations plus microcomputers and text processing facilities.

Owing to the continued success of the Group, the D.P. department is expanding and we now have a vacancy for a **Senior Operations Analyst**, who will report direct to the Operations Manager. The function of the job is the development of effective liaison with D.P. departments in all aspects of new systems and changes in current systems.

It is likely that the successful applicant will be in the 30/35 age range and will have had at least 2 years experience at management level in D.P. as well as having worked in a department running under DOS/VSE and CICS. A working knowledge of VSAM administration and SYSTEMS MANAGER is essential. Salary up to £12,500.

Benefits include company loan schemes, BUPA, non-contributory pension scheme and free life assurance, subsidised restaurant and a very active sports and social club.

Please write or telephone A.M. Dickinson, Personnel Officer, Save & Prosper Group Limited, Hexagon House, Western Road, Romford, Essex. Telephone: Romford 88988.

SAVE & PROSPER

DATA PROCESSING Saudi Arabia

A division of a major US high-technology corporation, awarded a contract to provide an automated logistics capability and management information systems, has immediate requirements for the following personnel, for its Riyadh office:

SENIOR SYSTEMS ANALYSTS: c.£25,000-12 years' experience

SYSTEMS ANALYSTS: c.£20,000-8 years'

LEAD PROGRAMMERS: c.£18,000-8 years'

SENIOR PROGRAMMERS: c.£16,000-4 years'

PROGRAMMERS: c.£13,500+-2 years approximately

OPERATOR: c.£13,500-2-3 years experience HP 3000 essential

The project encompasses a logistics data processing centre linked with remote processing stations to support the function of supply, maintenance and project monitoring. In addition to getting the system operational and partaking in software development, you may be responsible for providing support and on-the-job training.

Exposure to military logistics systems development would be ideal especially if coupled with HP 3000 experience, COBOL essential and a relevant qualification would be desirable. Employment will be for a minimum period of 1 year on bachelor status. Excellent benefits include: free accommodation, subsistence allowance, generous leave with 3 home paid leaves per year; free medical care and a contract-completion bonus.

Please telephone 01-887 6888 now if you would like to be considered as final interviews will take place the last week of July/1st week in August. Webb Whitley Associates Limited, International Recruitment Consultants, 45 Kensington High Street, London W8 5ED. Telex: 882588.

WA Webb Whitley Associates Ltd.

01-887 6888

Your gateway to the future with

BL Systems Limited is the UK's leading independent Systems Company and owner of the largest private microwave network in Europe. The Company operates on an entirely autonomous basis, selling and implementing its own products and services at competitive prices within a broad and prestigious Client base.

BLSL is the market leader within the sphere of Value Added Network Services (VANS), which include VIEWSHARE (a private Viewdata service), COMET (an electronic mail service), and Interactive Decision Support Systems Services.

The Company's plans to considerably increase its share of the growing telecommunications market have continued to create new opportunities within BLSL, current requirements calling for

Communications Consultants (Salaries to £15,000 + Bonus + Lease Car)

whose role within the BLSL Communications Services Group will be to provide specialist advice and guidance to a wide range of Clients, concentrating on the areas of networking/data communications.

Specifically, duties will encompass

- * Project management of network implementations (including handover, documentation and user training)
- * Professional consultancy studies of external Clients' networking requirements
- * Providing technical support to the product, including sales/customer liaison

These demanding, yet extremely rewarding positions will suit mature, technically competent individuals, with a marked degree of business awareness, good powers of expression, an intense interest in the rapidly developing world of data communications (preferably having current experience of the design and implementation of total networking solutions), and a desire to remain directly involved in the technical aspects of networking/data communications.

Good knowledge of packet switching methods (e.g. PSS), integration, OSI standards, Government legislation regarding deregulation and experience in an IBM/DEC environment would also be highly desirable.

These positions are integral in BLSL's on-going strategy of expansion and offer a high degree of variety and challenge. Terms and conditions of employment are

excellent and include a low cost leased car, bonus system and 25 days annual holiday, together with an attractive relocation package where applicable. The positions will be based at the BLSL Data Centre, situated in Redditch, a pleasant, low-cost housing area in North Worcestershire.

Suitably qualified candidates should forward a concise c.v. to Ian Payne, Supervising Consultant at the SCR Birmingham office as soon as possible. Initial interviews will be held at SCR Regional offices during the course of the next few weeks.

We are the major supplier of Seat Belts and Mirrors to the Motor Industry in the U.K. and have a significant export market both direct and through sister companies and licensees. At Chichester we employ c.800 people and are part of a major British public company.

As a result of reorganising and expanding our DP activities, which are based on an Amdahl V6 (12 mega) and a range of modern sophisticated software, we are looking to fill the following vacancies:

TECHNICAL SUPPORT ADVISOR

Reporting to the DP Manager you will be responsible for providing technical support for the operations and systems development section, as well as assisting users with micro's/mainframe interfaces. We are looking for 3-6 years' experience in COBOL, CICS, DLI, DOS/VSE3.

OPERATIONS SUPERVISOR

Again reporting to the DP Manager the job is accountable for Data Entry, Data Control, work schedules, operation documentation, operation standards, system acceptance testing, liaison with users on 'live systems'. Applicants should have some previous supervisory experience and knowledge of DOS/VSE3, JCL, IBM hardware and key to disk systems.

ANALYST PROGRAMMER

Working directly for the DP Manager this position will investigate, analyse, design and document programme test and implement systems and as required provide any necessary user training. Good business background with knowledge of COBOL/RPG II and extensive systems experience.

All these positions are based at Chichester with all the facilities of the South Coast close at hand. We can offer competitive salaries and a relocation package where appropriate.

Please apply in writing giving full details of age, experience and current salary to:

J. Burnett, Personnel Director,
Britax (Wingard) Limited, Chandler Road, Chichester,
West Sussex PO19 2UG.

Senior Managers and ambitious Systems Analyst/ Programmers

Join our team working in an exciting environment on the South Coast

Plessey Aerospace Limited, a member of Plessey plc, designs, develops, manufactures and supports a wide range of equipment for aerospace defence and industrial applications throughout the world.

The Computer Systems Department is responsible for the design, development and operation of both batch and transaction processing systems which have extensive applications within the manufacturing, defence, commercial and engineering functions.

Mainly I.C.L. orientated, the computer installation includes a remote 2966 (D.M.E. under GEORGE III), two local ME 29 machines (under T.M.E.), and a local P.D.P. 11/70 running under RSX/11M.

Because of an increasing demand for new systems, the Company wishes to appoint a number of Senior Managers and Systems Analyst/Programmers to be responsible for identifying, specifying, programming or controlling the programming of a variety of business systems. These positions are at varying levels of seniority.

Applicants will ideally be qualified to degree level, or equivalent, and should have a minimum of 3/4 years' ICL COBOL programming and systems analysis experience within a manufacturing environment.

Your reward
Salary is fully negotiable and sufficiently flexible to accommodate the aspirations of highly motivated computer professionals. In addition we will offer a range of attractive benefits. Generous relocation assistance to this attractive part of the Hampshire coast will be given where appropriate.

Just write, or telephone, quoting reference CWP/874 to: J.E. Kelly, Senior Personnel Officer, Plessey Aerospace Limited, Abbey Works, Titchfield, Fareham, Hants. PO14 4QA. Telephone: Titchfield (0329) 43031, extension 2883.

These posts are open to both male and female candidates.

SOFTWARE HOUSE DEVELOPMENT OPPORTUNITIES

£8,000 to £16,000

CENTRAL LONDON & HOLLAND

One of the UK's largest and most prestigious software houses has a requirement for additional development personnel resulting from its continued sales success. These opportunities are for good technical staff of various levels of skill to work in a development capacity on a variety of large commercial projects.

Our client offers the following major advantages to DP Professionals considering a career move at the present time:-

- real career progression within one company at both technical and a managerial level.
- involvement on meaningful development projects of critical importance to client companies.
- A stimulating and professional environment with excellent training in up-to-date methodologies.
- A wide variety of commercial applications primarily with a real-time or on-line bias.
- Financial rewards throughout the company which are excellent and with a benefits package in line with the best in the software house industry.

PROGRAMMING MANAGERS To £16,000

Based in Central London you will have successfully managed large programming teams, developing commercial applications using COBOL. You will have a real sense of urgency about your work with the ability to act and meet tight deadlines. Your experience will include modern techniques, such as Structured Programming methodology, and have produced work of a good quality. Considerable opportunities exist for both technical and personal career progression.

DATABASE DESIGNER To £15,000

An additional Database Designer is required for projects based in Central London. You will possess good technical skills in addition to practical database design experience. You will possess knowledge of at least two different Codesyl Database Management Systems, possibly including the HONEYWELL IDS System. Initially you will work as a member of a team on a major project. However, for suitable applicants with the proper potential there is the opportunity to progress to the level of Database Consultant.

Operations Support for a Major Financial Institution with 6 x IBM 3081s

Our client, a leading financial institution with very extensive hardware resources, is constantly making use of all the latest software/development aids and seeks to employ six qualified personnel in the area of Operations Support.

Successful candidates will join a team of operations support specialists based at our client's data centre in London. They will be primarily responsible for installation of applications, systems software, new releases, etc., for the writing of operations procedures and JCL and for the evaluation of new products.

If the work sounds attractive, then consider the following criteria to see whether you are someone who should apply:-

- At least 4 to 5 years experience of working in operations and/or operations support at a large IBM installation (370/, 303X or 308X series machines)
- A good understanding of IBM JCL and utility software
- A thorough knowledge of the MVS operating system together with JES2 and/or JES3
- Preferably be conversant with IMS, MTO/recoveries and use of TSO
- Aged 23 to 35/ish

Now you can see that you are a perfect or almost perfect match, consider the other attractions:-

- A salary ranging from £7,700 to £11,450 including London weighting allowance
- Paid overtime when undertaken
- A non-contributory pension scheme
- Profit sharing and annual bonus schemes
- After a qualifying period, the facility of a low interest mortgage, low interest personal loans and an interest free season ticket loan
- Excellent subsidised restaurant facilities
- Sports and social club facilities
- A very secure environment
- A realistic career path

The vacancies must be filled as quickly as possible so please respond at the earliest opportunity.

ENGLEDOWN

COMPUTER PERSONNEL CONSULTANTS

ANALYSTS/ PROGRAMMERS £8,000~£13,000

Our client, an enlightened people minded organisation, based in a highly attractive part of the West of Scotland, is looking for Analysts/Programmers who can fit into a team environment and who have a lot to offer.

You should have 2-3 years experience in the Analysis and Design of either Commercial or Manufacturing Related Systems, allied to good programming skills. Experience of BASIC + 2, RSTS, VAX, VMS, COBOL and BASIC would be advantageous as would a knowledge of database management. Full training will be given in languages and hardware as required.

Our client's philosophy is one of flexibility, and your personal skills and

experience will be tuned into the sector that suits you best.

Above all, to succeed with our client, you've got to be career minded, positive and have the ability to make an immediate and positive contribution to their overall success.

You'll become an important member of a truly professional team, enjoying a top flight salary, excellent benefits, and the prospect of working on varied and challenging projects.

The breadth of experience to be gained with our client can only enhance your value as a professional, and develop your career for the future.

'Press the key for career success - and reap the benefits'

Trafford House, Chester Road,
Manchester M32 0RS.

Letters from individuals will be opened, acknowledged and forwarded to our client. Please list in a covering letter companies to which your application should be sent. Open to male and female applicants.

Computer Service SYSTEMS DESIGNER Up to £14,000

We are one of the leading local authorities in the introduction of Information Systems with an active professional department where high standards and training are key priorities.

We operate an IBM 4341 with DOS-VSE, CICS and COBOL. An IBM 3083E is planned for 1984. Personal computing facilities are increasingly in use.

The majority of our work is new development, encompassing a wide variety of challenging systems, including finance, housing, libraries, planning and law.

We are currently seeking a Systems Designer for one of our three development teams. Reporting to the Project Manager, you will be involved in all aspects of project development including analysis and design, technical supervision and reviews, and implementation and documentation, using BIS Structured Methodology.

You should have a minimum of 5 years in Data Processing, preferably in an IBM environment, with at least 3 years' COBOL and some analysis experience. You should be able to communicate with both technical and user staff, and supervisory experience would be an advantage. A local authority background, while useful, is not essential.

We offer a competitive salary, 28 days' leave, interest-free season ticket loan after qualifying period, subsidised restaurant, flexible working hours and excellent training facilities. We are conveniently located in modern air conditioned offices close to Kensington High Street.

For further details ring Ken Batchelor on 01-837 5484 Ext. 336.

SEABORNE IN REAL TIME!

Surrey ca £11K

Marine radar is essential in keeping busy modern shipping lanes safe. This is your chance to help develop new systems that make them work in real time.

Your first for innovative design will be particularly useful at the proposal and design stages - to find out how three years plus REAL TIME SOFTWARE experience then fits in with your opportunity to make a POSITIVE CONTRIBUTION to MARITIME SAFETY.

Call Mr. Vincent Manning NOW on 01-646 841 for further details.

AN EXECUTIVE (KINGSTON) LTD

IBM ANALYST/PROGRAMMER (NEW INSTALLATION)

CITY ca. £13,000
Our client, a prestigious financial management organisation who currently utilise the services of a bureau, now wishes to recruit their own in-house COBOL Analyst/Programmer who has around 4 years' experience, of which 2 years has been spent in Systems Design, writing interactive applications, talking with users, and using IBM DATA BASE TECHNIQUES.

Your initial task would involve working with the service team on completing their current financial system, which would eventually be moved in-house to run on their IBM 4341 using CHIV/IVL, and from there on, design, develop and maintain other financial systems as required.

As well as a proven technical background, you must have the ability to produce VERY HIGH STANDARDS OF DOCUMENTATION.

The candidate who feels qualified for this position would eventually become the key figure in the installation.

For further details please telephone Shirley Francis, quoting Ref. 6877 on 01-489 7761 or between 7-9 p.m. (0636-761844).

Lloyd Chapman

123, New Bond Street, London W1Y 0HR 01-489 7761

Systems Project Leader

Location: Rural, to the south of London

Salary: Circa £16,000 per annum, plus outstanding benefits

Our client, a major IBM user, wishes to fill the important position of Systems Project Leader in their growing Management Services Group. They are looking for someone with good all round systems development experience. Someone who has worked in a manufacturing or an engineering development area would be a particularly attractive candidate. However, more important is the ability to cope with both systems and people in a pressurised environment.

You will probably be in the age range of 28 to 35, and have a successful track record in systems development stretching over a period of at least seven years. You will believe that you can contribute significantly to an expanding systems group and will enjoy the rewards this brings both in financial and personal terms. Although you will be joining an established

team, you will be given every opportunity to make a major contribution to the continued expansion of Management Services within our client's company.

Our client is probably the leader in their field. They have achieved this by offering services that are second to none. Computing has played a major part in achieving this high standard! Their expectations are high and they are demanding employers, but the career opportunity presented is much better than average and will certainly excite someone "on the way up".

If you are anxious to develop your career significantly then send your curriculum vitae to A & A Consultants (Holding) Ltd, County House, 10 Little Portland Street, London W1N 5DF. Telephone 01-631 4184. Please quote Ref. No. 301.

IBM Systems Programmers

£6,000-£15,000

Our Client is based in one of the most picturesque parts of rural Cheshire.

The Company is embarking on a major expansion of their Data Processing function, and require additional systems programmers with a sound technical background, preferably in an IBM MVS environment.

Positions available range from trainee to management level in the company's technical support section.

Candidates applying for the senior position will have a minimum of six years' systems programming experience with a proven track record of man management, essentially in an IBM MVS environment.

THE INSTALLATION
IBM 3031/3083 MVS/SP with 250 terminals online

SOFTWARE:
SMP4, CICS, ACF, VTAM/NCP, TOTAL DATABASE

LANGUAGES:
PL/I, ASSEMBLER, APL

Preference will be given to candidates with relevant MVS experience, although this should not deter systems programmers with other operating systems experience from applying, including technical operations and commercial programming personnel.

BENEFITS:
Generous relocation
Paid overtime
Possible short-term house lease scheme
Full sports facilities including squash courts

HEWITT MANAGEMENT SELECTION

2nd Floor, 6 Church Street
Altrincham, Cheshire

Duncan Bransom Software Systems Ltd. will be continuing their expansion throughout 1983 and are now looking for COBOL PROGRAMMERS £9,000 - £12,000

The company, formed in 1974, has dedicated itself to the production of applications software of the highest quality, mainly for IBM mainframes.

To cope with the steady demand for its services and the growth planned for 1983 there are now vacancies for at least two COBOL Programmers.

Successful applicants will have had a minimum of two years COBOL experience on IBM machines. Knowledge of CICS, DL1, COPICS or ADABAS would be an advantage but this is not essential.

If you are looking to join a small dynamic organisation where, through your ability and hard work, you seek to progress to the top, this could be the opportunity for you.

You should be prepared to work either in our offices in the City or on the premises of our clients, most of whom are located in the London area.

A pleasant, stable working environment is maintained where people can develop their professional skills whilst earning good money. In addition to the salary, which is dependent on experience, there are a range of benefits including paid overtime and a profit sharing scheme.

Please contact PHILIP TAYLOR on 01-253 2196 to discuss a possible appointment, or write sending brief details of your career to date. Under no circumstances will your present employer be approached without first obtaining your permission in writing.

Confidential Reply

A major computer services company, operating on a national basis, has recently launched a powerful financial planning package designed to run on microcomputers. They are soon to mount a widespread marketing campaign and require a Sales Person to develop the existing dealer network.

This is a responsible position covering the country as a whole and reporting directly to the managing director. It is essential therefore, that candidates are self starters with a successful background in sales. Experience of financial planning and microcomputers would be advantageous.

This is a real opportunity to establish a new software product and enhance both career and earnings.

LOCATION: UK

TS701

RECRUITMENT CONSULTANT

c. £10,000

NBA

This is a real opportunity to share in the success of the fastest growing consultancy in the UK. Ideal candidates will have experience of selling computer services or equipment but we are also very interested if you are currently employed in a technical role and feel you have the drive and ability to succeed in consultancy.

NBA Search International has offices in Worcester and Aylesbury and are now seeking to expand with the addition of two more consultants. Successful applicants will receive a high basic salary, car allowance and a valuable opportunity to increase earnings by a 10% bonus.

COMPUTERS

Exceptional Growth Company

Future Computers Limited is a new British company dedicated to the design and manufacture of leading micro computer systems aimed at the business market. Future Computers is backed by a consortium lead by the British Technology Group and the APA Venture Capital Fund.

The philosophy of the Company has been to create an advanced family of 16 and 32 bit computers using the best of design and technology with features to satisfy known and future needs in industry and commerce, and still priced to compete in world markets. The introduction of the Future computer range offers the business user a wider choice of planned options than has ever before been available from a micro computer manufacturer.

Starting with a powerful stand-alone micro computer, the range can grow simply and cheaply to become a fully integrated electronic office, with multi-user, multi-tasking networks and micro to mainframe communications. The 'future evolution' concept allows any size of business from the High Street to Wall Street to enter the range at a performance level to suit its needs, and grow from that point.

Senior Analyst — Systems Software

To £14,500

If you can claim two out of the following we would like to talk to you:

- Five years experience in micro/minicomputers.
- Communications experience.
- Responsibility for planning software development in overall design structure.
- Knowledge of operating systems.

The successful candidates will become responsible for state-of-art developments in the following areas: INTEL 186/286; ETHERNET and other local area networks; colour graphics; Winchester controllers; CP/M/86; MSDOS; UNIX.

For an informal interview or to obtain further information please call Ian Goldsmit on 01-935 0671 during office hours; alternatively send your confidential resume to the London address below.

Technical Sales & Management Appointments

Systems Programmers

£8-£12,000

We would be interested to talk to graduates with a relevant degree or equivalent, and individuals with experience in one or more of the following areas:

- One year or more experience in mini/micro computers.
- Communications experience.
- Knowledge of operating systems.

SYSTIME

Rise to the challenge of Systems Development

The West Midlands Passenger Transport Executive is a leading Public Transport undertaking with a fleet of 2,000 vehicles and a total of over 8,000 employees. We have embarked upon an extensive programme of applications development, including on-line and database systems. We use an ICL 2988 running under VME 2900 and a 2960 running DME/George III. In addition, the Executive operates an ME 29 Microcomputer using TME. We are currently developing a complex telecommunications network based on Local Area Network technology designed to provide local processing facilities at sites throughout the West Midlands. The opportunity now exists for experienced computer professionals to work on projects within the development programme.

Technical Co-ordinator £10,393 - £12,048
To control, co-ordinate and advise on the investigation, design and implementation of communications networks incorporating hardware and related systems. A minimum of 4 years technical experience in planning and implementing data communications networks is required, together with experience of ICL communications and FACAL equipment.

Senior Programmer £9,240 - £10,794
To direct and co-ordinate a small team of programmers on the development and maintenance of a wide range of computerised systems. Additionally he/she will contribute towards the development of management information systems. A minimum of 3 years experience of COBOL and ICL hardware is essential and some experience of database applications would be useful.

Programmers £8,571 - £10,006
To join a small team developing and maintaining programs for a wide variety of management and financial information systems, including Database applications. Applicants should have a minimum of 3 years experience of COBOL and ICL hardware; some knowledge of Filetab would be advantageous.

All posts are based in Central Birmingham and carry attractive fringe benefits. Job descriptions and application forms can be obtained from: Personnel Department, West Midlands Passenger Transport Executive, 16 Summer Lane, Birmingham B19 3SD. Tel: 021-622 5151 ext. 41. Closing date for receipt of applications 3 August 1983.

West Midlands Passenger Transport Executive

IBM COBOL — BANKING SYSTEMS

ABN Bank

... Algemene Bank Nederland is one of the world's largest banks with branches spread internationally in 42 countries. ABN Bank's international network is constantly being expanded to further improve its service to an evergrowing worldwide clientele hence they are seeking to recruit three additional staff for their London based dp department.

The London Data Processing Centre has recently developed and implemented a large DL1 Database system currently being used by the UK branches.

Further development and enhancement of the system is now being undertaken to enable it to be used by the Group's international branches.

Successful candidates will rapidly become involved in this area and several new projects envisaged for early 1984.

CHIEF COBOL PROGRAMMER

to £13,000 + Bank Benefits

As Chief Programmer you will be responsible for co-ordinating and leading a medium sized team of programmers, scheduling work and ensuring standards are maintained. You will advise and assist where necessary and liaise regularly with both users and analysts. Your background should include a sound knowledge of COBOL and experience of DL/1.

COBOL PROGRAMMER

to £11,000 + Bank Benefits

With a minimum of 2 years' COBOL expertise preferably gained within an IBM DOS/VSE environment you could be given the opportunity to join this international bank.

Preference will be given to candidates knowing DL/1 although FULL TRAINING in DL/1 will be provided if necessary.

Hertz

ANALYST PROGRAMMER

Circa £11K

- with
- * European travel
 - * TI & IBM development
 - * Excellent career prospects

Based at the modern West London Head Office of Hertz Europe, you will be one of a team of 10 in the Pan-European Development team. Your work will focus on developing and installing systems on overseas TI990s which have communication to our client's Head Office IBM mainframe.

This will entail European travel, liaison with senior user staff, and troubleshooting, within 7 countries covered by the European operation. Project requirements will determine frequency and duration (normally 1 to 5 days) of these trips.

Our client regards personality to be equally as important as the right background in making this appointment. Positive, confident and outgoing, you should have 2 years COBOL on IBM mainframes and/or TI990s as well as having some analysis and user experience. Because of the demands of the job, single status could be an advantage.

To find out more about this exciting opportunity, please call Jeff Boston on 01-830 4041 during business hours or 078087 428 during evenings and weekends.

COBOL in Surrey

ICL 2900 DEC/VAX Micros

Analyst/Programmers to £11,000

This established Management Services Department is gaining an increasingly heavy volume of work from user departments and is in the process of developing new systems. These will be on a variety of hardware—ICL 2900 mainframes (under VME and DME), VAX 11/780 (VMS) and micro-computers, both stand alone and linked to the mainframes. If you have 3-5 years' experience of COBOL programming and design, gained in a VME, DME or VMS environment, these offer you the opportunity of initial training in appropriate areas and other training as your career develops. There are many benefits in addition to the salary, including assistance with removal expenses where necessary.

For these and other positions please contact Joan Ainsworth on 01-681 8311 or write to her at Computer Search and Selection, 6th Floor, Carolyn House, Dingwall Road, Croydon, Surrey, CR0 9XF.

Senior Programmers to £10,500

If you have substantial experience of ICL COBOL, are a good organiser and can offer leadership skills, this position gives you the opportunity to gain supervisory experience and a knowledge of micros. Training in structured programming techniques will be given where necessary. A knowledge of BASIC could be useful.

Programmers to £9,000

A minimum of one year's experience of ICL STRUCTURED COBOL is required for these positions, one of which will offer training in VAX 11/780 COBOL, as some applications are being converted to an on-line environment. The sports and social club is very active.

Computer Search & Selection

We need more assistance to tackle some knotty problems

Opportunities now exist within an internationally successful organisation to develop high technology display systems at their recently established division in Surrey. Whilst providing the security of a large company the division is small enough to operate autonomously having a young management team which has already created a friendly and dynamic work environment.

SENIOR ANALYSTS TO £12,500 PROGRAMMERS TO £11,000

Young and enthusiastic Senior Analysts and Programmers are invited to join small highly creative design teams utilising the latest techniques on 8086/80286 micro processor hardware.

Ideally you will have experience in some of the following:

HIGH LEVEL LANGUAGES
(RTL/2, PLM/86, CORAL)
REAL-TIME SYSTEMS
MULTI TASKING, MULTI
PROCESSING EXECUTIVE
HOST/TARGET DEVELOPMENT
USING VAX 780.

You will become involved with:

LANs (ETHERNET)
X25 PACKET SWITCHED NETWORKS
DISTRIBUTED DATABASE SYSTEMS
RASTER GRAPHICS
GRAPHICS KERNEL SYSTEM
DIAGNOSTIC SOFTWARE

Information Processing People

20 Kensington Church Street, London W8 4EP
Telephone 01-938 1804 Telex 22861

Miles Richards on 01-938 1804 (24hrs) or 01-847 2385 (7pm-9pm).

DRAGON Data Ltd

Today's Dragon strikes no fear! It does however have the same strength of purpose as the creature of mythology.

Dragon Data Limited is profitable, rapidly expanding and symbolic of that which is best in British Technology. Innovative in the design, development and manufacture of high quality, successful products, it is now a market leader and major exporter in home computers.

New projects are for business, education and other applications using multi-tasking multi-user systems, based on a variety of microprocessors including 6809, 68008 and 8088.

The continuing success of the Company requires additional ambitious, committed professionals seeking the opportunity for projecting their ideas and efforts into a young dynamic organisation.

Project groups are small, dedicated and generally operating to short timescales. This provides considerable challenge, involvement and responsibility.

Applicants of the highest calibre are sought and outstanding salary and benefits will be offered for all posts.

Project Leaders

Applicants will be degree qualified and have several years hardware design and development experience embracing microprocessor based technology. A software appreciation would be an advantage. Leading a project team in addition to significant and demanding project control you will be expected to provide an extensive technical contribution.

Development Engineers

These are excellent opportunities for graduate engineers having a minimum of 2 years in design and development to expand their experience of circuit design across a range of micro based equipment and peripheral devices.

Programmers

Programming skills in Assembler, C, Pascal or a similar high level language is required, and a good appreciation of hardware would also be useful. Applicants should be degree qualified and have considerable experience of application software on microprocessor based devices and systems.

Senior Technical Author

This is an outstanding opportunity for an ambitious Technical Author to join a new and expanding group. Applicants should be degree or HND qualified and have considerable technical and literary skill. Effective communication with the development group will be necessary to produce a wide range of technical, product and operating manuals. To undertake this task, a good appreciation of microprocessor techniques is essential.

The Company is located in the beautiful South Wales countryside, and within 10 minutes drive of sandy bays and beaches. Housing in the area is attractively priced and plentiful. Excellent motorway links to the cities of Swansea and Cardiff and the amenities within commuting distance. A comprehensive relocation package will be available where appropriate.

Please apply providing a full C.V. to Barrie Witt or Digby Dyke, Dragon Data Ltd, Old Bank House, Bank Street, Worcester, WR1 2EW. Alternatively further information or an application form may be obtained by telephoning: Barrie Witt or Digby Dyke—0905 611512 Office hours or 06845 66372 and 06845 2210 Evenings and Weekends.

Computer Personnel & Executive Development Associates Ltd.
Old Bank House, Bank Street, Worcester, WR1 2EW

Philip Hunter traces an interesting development in the contract market

Are the contractors starting to squeeze out the agencies?

CONTRACT agencies are now finding themselves squeezed between contractors who are demanding more money to at least keep pace with inflation, and clients who have imposed a freeze on charge out rates.

For many this will seem a good thing. The agencies have long held a near monopoly of the contract market, and many contractors and clients alike feel they have been taking too much of the cake.

But now, as the contract market shifts its axis to more specialist computer applications, it is more and more the contractor who is calling the tune. And at the same time clients are demanding more of their contractors.

Contract agencies operate by charging a fee to a client for a contractor's services, taking out their cut, and passing on the rest as a weekly, or sometimes monthly wage. Traditionally this cut was 25 to 30% of the fee.

Now it varies more, but has come down on average to around 22%. VNG Professional Services, which does a lot of business in the North of England, now takes an average 18%, and for clients which nominate it as one of two or three preferred suppliers, the cut is not much over 10%.

Agencies have also come under attack by a National Computer Contract Directory, set up by Wiloway. This abolishes the agency fee by putting contractors and clients in direct contact. It has achieved modest success, but some clients are deterred from using it because it involves more work sifting through curriculum vitae and organising terms of contract.

Clients usually take on a contractor for one of two reasons. Either it is to fulfil peak demand such as when a project is in full flight, or it is a stopgap measure while the search for a permanent person goes on. Some companies also use contractors to give more immediate control over staff numbers.

For some companies the recession has eased this year, and this has meant that projects suspended in purgatory have come in from the cold. Hence a need for more contractors, especially ones skilled in systems programming, real-time software and IBM CICS.

The improvement in the market reported earlier this year by some agencies in the south east of England is now being repeated in the North, but in the Midlands the slump continues. Previous big employers of contractors there like British Leyland and Lucas are still not taking people, although with car sales hitting the roof, there is a good chance of improvement.

Some agencies recognise the importance of the provinces as business picks up. VLI, the UK's biggest agency, recently invited aspiring local contractors and permanent programmers, analysts and operators to a busy meeting in a Bristol pub.

"We see a need to hold these events in outlying areas where people cannot walk through the doors of our agency offices," says Lee Walkinshaw, managing director of three VLI companies, Computer People South, Midlands and North.

Some Bristolians might resent their cosmopolitan city being called outlying, but anyway 130 people turned up to see what contracting was all about, or maybe for the beer.

They had the usual cross-section of fears, says Walkinshaw. Were they good enough, and would they keep in work?

The answer to both questions depends on the type of skills. CICS, online, real time, database, that sort of thing, are in vogue, says Walkinshaw.

IBM has 60% of the contract market, Walkinshaw points out, which is more than its share of the computer market itself. "The man who's bought IBM is prepared to spend more money to get what he believes is the best," says Walkinshaw. And the best often swim in the contract pool, where the water is deepest.

Another quality required of a contractor is tact, insists Walkinshaw. "The contractor has to be something of a diplomat. He has to be able to function like a chameleon and do just what the client wants. It is no good for people who want to change the world."

It is getting harder to place junior people in the contract market. "The day has gone when you can place a contractor with just two years experience," says Walkinshaw. People are having to spend more time picking up experience in permanent work before blazing the gold-laced contract path. But if your skills are highly coveted, like CICS, then you can turn contract sooner.

And the market for operators has steadied after declining about two years ago. Many agencies do not bother with operators, but VLI, KPG, Knight Computer Services and Trident all do. More of the contracts for operators are now with distributed minicomputer systems, but there is still work at traditional mainframe sites.

Overseas, the boom area is the US, where people are reluctant to cover the vast distances in search of contract work. More American companies are therefore coming to the UK when a lot of staff are wanted at short notice.

VLI has opened a permanent office in Kentucky to look after one single account with a company called Capital Holdings. There are still 65 contractors working there 18 months after the first 60 people went out. The problems of immigration to the US can usually be overcome in weeks on big projects involving the bigger UK agencies and US corporate clients.

Trident is also picking up a lot of business in the US, and contracts manager Steve Whiting confidently predicts that in 12 months it will be as big as the UK operation.

Again IBM is the biggest market, but unlike the UK, there are many opportunities for Univac programmers. Univac has beaten IBM to several enormous defence contracts in the US, and Trident will shortly announce the dispatch of a big consignment of UK contractors to one of them.

There are still contracts to be had in the Middle East, but they are less lucrative than they were, partly because of the return to fiscal reality there that has accompanied the fall in world oil prices.

In Europe the contract market has declined, particularly in Holland where many companies used to hire foreign contractors to bypass the Dutch industrial relations act which forbade domestic contract labour.

Back in the UK, ICL contracts are flowing in fast. This follows the draconian staff cuts at ICL that came with the management changes of two years ago. The company was left with mere skeleton cover and has since resorted to contractors to make up project teams.

Meanwhile, many of the redundant ICL programmers have joined the contract labour force, and are working at ICL installations, rather than for ICL itself.

Inevitably, microcomputers are coming on the contract scene. Comac, one of the younger agencies that has flourished in the warmer economic weather, reports a new demand for programmers with experience of CISC based micros. And there are also contracts for Pascal programmers on scientific applications.

But it must be stressed that the number of micro contracts is far compared with the number of micros. When you can buy micro software for less than £100, it is not surprising that users would not be paying £500 a week for a contract analyst.

LAS VEGAS... And the US can be bright for UK contractors.

Did you know?

The longest continuous bagpipe solo was 50 hours, performed in 1969 & Trident are best for contracts!

Software Product Support

UCC Software Products Limited

Our Company.....

UCC Software Products Limited is a division of University Computing Company. UCC is a highly successful public company with an international reputation for its knowledge and expertise in software end services.

Today, as leaders in our specialised field, some 1800 of our computing professionals serve more than 5,000 customers in 21 countries worldwide, with superior software support and service. But we're not standing still. With a product range expansion programme well under way, we're growing fast, and we urgently need highly motivated ambitious people to grow with us, both in London and Germany.

Our Products.....

"Tools for Data Centre productivity"

UCC1 TAPE MANAGEMENT SYSTEM
 UCC2 (QDD) DOS TO OS TRANSITION SYSTEM
 UCC3 AUTOMATED DIRECT ACCESS MANAGEMENT
 UCC6 POS MANAGEMENT SYSTEM
 UCC7 AUTOMATED PRODUCTION CONTROL
 UCC8 MANAGEMENT SUPPORT SYSTEM
 UCC10 DATA DICTIONARY MANAGER
 UCC11 AUTOMATED JOB MANAGEMENT
 UCC20 OS JCL GENERATOR

Our Requirements . . .

We are looking for the following Experience.

- O.S. Systems Programming related to Operations.
- Good Assembler knowledge.

In addition if you have the following experience it would be a great advantage.

- UCC Product knowledge or similar.
- Installation and Support of O.S. related Software Products.

If you are in the 23+ age bracket, ambitious, and would like the opportunity to be part of the Software Industry, by joining one of the market leaders, then contact Steven Knowles-Baker on 01-370 2012/3 today. Alternatively, write to Steven Knowles-Baker, 159A Gloucester Road, London SW7 4TH enclosing a brief C.V. All correspondence will be treated in the strictest of confidence.

Select Opportunities

Our aim is to offer the very best career opportunities available. Our clients are among the best in the computer industry, covering all aspects of computing from commercial DP to leading-edge technology. Here are some of our most urgent requirements.

Systems Programmers/Software Engineers £8-£15,000

For a variety of data communications, office communications and software tools developments.

Applicants should have a degree in computer science, electronic engineering or a similar discipline, together with a minimum of two years' development experience in real-time applications.

Hardware Development Engineers/Project Manager £8-£15,000

To develop microprocessor-based telecommunications and data communications systems. Applicants should have knowledge of INTEL and/or Motorola hardware, together with Assembler and PL/M or a similar high-level language.

Technical Authors £7-£10,000 + benefits

To join a prestigious minicomputer manufacturer currently engaged in the development of systems software for operating systems, communications and compilers. Applicants should be experienced in the design, scheduling and preferably production of software and hardware user manuals. This is a real opportunity to progress to team leadership.

These are only a selection of the many genuine career opportunities we have on offer. If your experience does not match any of these appointments, but you are considering a move, please call us—we may well have the right opportunity for your particular blend of skills and talent.

Analyst/Programmers —Senior Systems Analysts to £15,000 + benefits

To join a leading systems and programming consultancy involved in the development of a variety of financial, commercial and local authority applications. Applicants should have a minimum of three years' programming experience, preferably on ICL or IBM hardware.

For the senior appointments, an extensive systems analysis background is essential.

COBOL Programmers £6-£12,000 + benefits

To join a leading Life Assurance Society based in Milton Keynes. Applicants should have a good educational background, together with a minimum of two years' COBOL programming experience, preferably on Univac 1100 systems. Experience of Univac 1100 Assembler and real-time systems would be an advantage.

Lecturers £11-£13,000

To join a training organisation specialising in the presentation of courses in commercial applications, including COBOL programming, systems analysis and database design.

Applicants should have a sound DP background, preferably gained in an ICL or IBM environment.

Previous training experience would be an advantage, but much more important is the DESIRE TO INSTRUCT, as full guidance in the preparation and presentation of course material will be provided.

Computer Search & Selection

Computer Search & Selection

PUBLIC SECTOR APPOINTMENTS

Data Processing Manager

Grade PO 3 (J)
£15,630-£16,950 inclusive.

Following the promotion of the postholder to a Chief Officer appointment with another London Borough, the Council is now inviting applications from persons who have had extensive experience at a senior level of Local Government computing. The Council has a twin IBM CPU installation with over 100 terminals and a substantial workload for all departments of the Council and the London Borough of Richmond. The complement of computer staff totals 50. Current developments include a variety of systems on the main frame, growing use of personal computers and the possible development of a Private Viewdata System.

The Computer group is a separate division within the Borough Treasurer's Department and the postholder will lead and manage the group as well as serve as a member of the Treasurer's Management Team.

The appointment calls for a high level of management skill and the successful applicant will be expected to take a positive role in developing computer services for the Borough.

Application forms from the Administrative Officer, Borough Treasurer's Department, Civic Centre, Lampton Road, Hounslow TW3 4DN. Tel 01-570 7728 ext 3372. Closing date: 12 August 1983.

Hounslow
AN EQUAL OPPORTUNITY EMPLOYER

(4815)

APPLICATIONS DEVELOPMENT OFFICER

Salary up to £9,300

Your responsibilities will include the installation and maintenance of microcomputer control systems for the Management and Administrative Sections of a large Service Department and to evaluate and identify suitable software for such systems. The Authority's main computer services are provided by ICL mainframe computer and you will be expected to liaise with Computer Development Sections of the Authority. You must have a background in microcomputers and be currently working with a manufacturer or major software house and possess the initiative and imagination to maximise the opportunities and meet the challenge to develop this service.

Hillingdon
Applications from disabled persons welcome

Teesside Polytechnic

SPECIFICATION OF REQUIRED TERMINALS

Teesside Polytechnic Computer Centre requests quotations for the supply of:

- (a) 28 Line-Splitter ADM 5 Visual Display Unit
 - (b) 8 Line-Splitter ADM 5 Visual Display Unit with RG1000 or GEN II graphics capabilities (including manual control of graphics cursor)
- Sealed quotations should be given for items (a) and (b) above, and the Polytechnic reserves the right to accept the quotation for one item but not the other.

Details may be discussed with the Head of the Computer Centre: Teesside Huddersfield 218121 ext. 4118.

Quotation forms may be obtained from: The Supplies/Purchasing Officer, Teesside Polytechnic, Borough Road, MIDDLESBROUGH, Cleveland TS1 3BA.

(4703)

Development Project Manager

Up to £14,300

Systems Analyst

Up to £11,600

The unopposed computer programme is designed to join the development team, one as Project Manager, the other as a Systems Analyst. The Project Manager will be responsible for the development, management, supervision and control of a large scale on-line T.P. system to which a multi-discipline Project Team is already in operation. Both persons appointed will have had considerable experience in the development of on-line systems preferably within a Honeywell environment.

This is the largest London Borough and we are involved in a comprehensive development programme utilising a Vax 11/780 Honeywell 68000 computer together with various other mini and micro computers. An excellent office adjacent to a large modern shopping centre and rapid transport links with central London 17 minutes by rail and the South Coast.

Salary according to experience will be within the range £13,336-£14,320 p.a. for the Project Manager and £9,657-£11,640 p.a. for the Systems Analyst with a contributory pension scheme and an annual leave entitlement of 24 days. The flexible scheme is in operation.

CROYDON

Contact: Mr. Alfred on 01-490 4433 ext. 2001 for informal discussions and/or send full CV to: Mr. Peter Smith, London Borough of Croydon, Labour House, Park Lane, Croydon CR9 3AB.

(4826)

The City is in the process of overhauling its financial systems by implementing a new city wide financial and management control system based on the purchase of a number of software packages and in house development. Implementation is being carried out by a multi disciplinary team within the Systems Section of the Accounts and Budgetary Control Division and suitably qualified persons are invited to apply for the following post:-

PAYROLL DEVELOPMENT

at a senior level
£11,364-£12,738

The City employs approximately 50,000 monthly and weekly paid staff and is about to replace its existing payroll systems with a software package (OLPec) supplied by MSA (Management Science America) Ltd.

The duties of the post holder is as follows:-

- Make a major contribution toward the formulation of a development plan for implementation of the new payroll system in conjunction with the Computer Centre.
- Give assistance in examining all existing computer and manual financial systems within the City Treasurer's Department as they relate to Payroll. To relate this research to the implementation of the new system which is an on line project system with personnel facilities involving management reporting.
- An involvement in on line systems and personnel computing will also be required.
- Ideally candidates should have a wide experience in payroll and/or systems work, preferably in the implementation of OLPe in another organisation.

Application forms returnable by 12th August 1983 obtainable from City Treasurer's Department, Personnel and Services Office, Council House, Birmingham B3 3AB. Telephone:- 021 235 2993 or 2385 quoting reference PD1. Informal enquiries to R. Chapman 021 235 2386. Canvassing will disqualify. An Equal opportunity employer.

(4811)

BIRMINGHAM CITY COUNCIL

ASSISTANT LIBRARY OFFICER (Automation)

Graduate programmer/analyst required as soon as possible to undertake the introduction of an on-line book issue system, including design, implementation and day-to-day supervision. Programming in FORTRAN 77 on a Pärin-Elmer 3220 using barcode readers. Salary on the scale £3,745 to £5,075. Further particulars from the University Library, City of Birmingham University Library, West Road, Cambridge, CB3 9DT, to whom applications should be sent by 9 September.

FOR CLASSIFIED ADVERTISING USE DIRECT LINES

RECRUITMENT CONSULTANCIES (01) 661 8787

DIRECT ADVERTISERS (01) 661 8080

MANAGER

SKELMERDALE INFORMATION TECHNOLOGY CENTRE
£12,490-£13,805

The Skelmerdale Information Technology Centre, which is being sponsored by Lancashire Enterprises and West Lancashire District Council is seeking a Manager to lead a team to supervise this challenging new project.

The Centre will provide 12 months' training and "hands on" work experience for 40 young unemployed people in the new information technology, thereby enhancing their job prospects.

The Centre will cover three main areas of training: (i) Micro-Electronics/modern electronic component and the use of microprocessors as simple control devices; (ii) Microcomputing skills associated with microcomputer operations; an appreciation of computer architecture, both hardware and software; and an elementary high-level programming facility; and (iii) the Electronic Office/Use of computers and electronic communication systems in modern business applications.

In addition the Centre will assist the local industrial and commercial community by making the technology accessible to local firms, especially new and small businesses.

The successful candidate will be responsible to the Management Committee for the efficient and effective running of the Centre, and will have qualifications and/or significant experience in the micro-technology field. The position requires the ability, enthusiasm and commitment to motivate young people and to establish and maintain a wide network of contacts with industry, commerce, academic institutions, etc., in order to develop the work of the Centre in an imaginative way.

More detailed information can be obtained from the address given below.

Please write with full CV to the Personnel Manager, West Lancashire District Council, 82 Derby Street, Ormskirk L40 2DF.

(4804)

PETERBOROUGH CITY COUNCIL

CITY TREASURERS DEPARTMENT

COMPUTER AUDITOR

SENIOR OFFICERS GRADE 1/2
£9,060-£10,539

Applications are invited from persons with relevant computer experience for this post which is situated within the Audit Section.

The postholder will be responsible to the Chief Internal Auditor, and as the Council is engaged in an extensive and ambitious development programme, the person appointed will be required to expand and develop the Authority's approach to computer audit incorporating both new and existing systems.

The Council has recently installed a range of ICL equipment, including a network of terminals located in most central departments, all are linked to a central ME29 which also acts as a terminal link to an IBM 4341.

In addition to the salary we offer:

★ Flexible working hours (37 hours per week) and (in appropriate cases)

★ Generous relocation expenses (including solicitors and estate agents fees)

★ Housing accommodation or lodging allowances

Application forms and further details available from City Treasurer, PO Box 9, Town Hall, Bridge Street, Peterborough PE1 1HG, or by telephoning Gulam Sherrall on (0733) 63141 Ext 383.

Completed application forms should be returned by Friday, 12th August, 1983.

(4808)

TECHNICIAN (Grade 4)

Required in Department of Land Management and Development, University of Reading, to take responsibility for the day-to-day running of the Department's computing facility. An interest in the development of software would be an advantage. Salary in Scale £5,265-£5,702 p.a.

Application form available from Personnel Office, Whiteknights House, University of Reading, Whiteknights, Reading, RG6 2AH. Please quote Ref: T11A.

(4773)

RESEARCH OFFICER

A graduate is required as soon as possible to work on a three-year BSC project to develop software and theoretical techniques for the simulation of a nonlinear control system using a PDP computer. The candidate would be expected to have an engineering or mathematics degree with a good knowledge of control systems and an interest in programming. Salary will be in the range £3,745 to £5,075. Further details and application forms (to be returned by 20th August) from Assistant Registrar (Personnel), Kingston Polytechnic, Penrhyn Road, Kingston upon Thames KT1 2EE. Tel: 01-549 1386.

(4760)

KINGSTON POLYTECHNIC COMPUTER UNIT

COMPUTING OFFICER

The User Services Section of the Computer Unit provides all the user support for the computing facilities offered at the Polytechnic for both staff and students. The Section's responsibilities include a wide range of applications software, compilers and documentation, as well as program advisory and user education services.

There are two vacancies for graduates (in any subject) within range Scale A/6 (per) SO1: £6,861-£8,308 (per) £10,267.

Further details and application forms (to be returned by 20th August) from Assistant Registrar (Personnel), Kingston Polytechnic, Penrhyn Road, Kingston upon Thames KT1 2EE. Tel: 01-549 1386.

(4804)

NEWCASTLE HEALTH AUTHORITY

COMPUTER DEVELOPMENT OFFICER

Scale 14: Salary £25,404 to £31,424

Are you a specialist in computing with an informed overview of the range of hardware and software options available to potential computer users in the NHS? Interested in helping to shape a more coherent policy for computing in a large teaching authority? Advice, liaison with University, medical and scientific staff, and opportunities for personal involvement, are all ingredients in this job.

Application form and job description is available from the Personnel Division, Newcastle Health Authority, 3-10 Arabinth Terrace, Jesmond, Newcastle upon Tyne NE2 1ER. Telephone Newcastle (0922) 215011 ext. 218/219.

Closing date for applications, 19th August, 1983.

Systems Analyst

Salary Scale SO 1/2 (£9,060-£10,539)

The Council is currently in the process of converting work from an ICL 2904 to ME 29/54. When this is complete the next stage of development will include an expansion of on-line facilities, particularly for other departments.

Applicants should ideally have experience of systems work and ICL Hardware/Software.

Assistance with housing may be available, coupled with a contribution towards removal and legal expenses.

Application form and job description available from the City Treasurer, The Guildhall, Cambridge 1701. Cambridge 358377 ext 3011.

Closing date 18 August 1983

City of Cambridge

An equal opportunity employer

(4838)

Principal Engineer

Management Systems

Salary Scale £13,725 - £15,033
Post No. SM 205

This vacancy arises due to the imminent departure of the present postholder, who with other colleagues is setting up a private company.

In West Sussex, considerable investment has been made in VAX and IBM computers and specialised peripheral hardware for graphics and data collection. Computer use extends from engineering design and drafting through information systems to financial, management and control systems.

You will be responsible for formulating policies for the expansion of computer use and office automation, and for the provision of a computer based management information service.

Under development is a Resource Management System for the administration and operation of the Direct Labour Organisation, and fourth generation software tools are being used to improve development efficiency. This project involves fundamental changes in working practices within the department.

You will need to show considerable management ability and possess an appropriate qualification for this demanding post in a technical environment.

Analyst/Programmer

Salary on a scale rising to £10,539

Post No. SQ 102

The successful applicant will work as part of a small team engaged on an extensive project for the administration and control of a direct labour construction organisation.

VAX 11/780 and 750 computers are used together with a fourth generation software development system ADMINS-11 and training in the use of the facilities will be given. Candidates should have 2 or 3 years experience in commercial applications programming using high level languages and hold an appropriate qualification.

Removal, resettlement and lodging allowances are payable in approved cases and temporary accommodation may be available.

Further details and an application form are available from County Surveyor, County Hall, Chichester, West Sussex, PO19 1RH or telephone (0243) 777973 quoting appropriate reference number. Closing Date Tuesday 16th August, 1983.

Or alternatively contact Lynne on 01-543 4140 (evenings and weekends)

PERMANENT POSITIONS

MVS SYSTEMS CONSULTANT - to £17,000 + Car + bonus
West of London

A major international software supplier is currently looking to add to its MVS systems team. You will be responsible for pre- and post-sales support of company products, which will involve you in presentations, demonstrations and training as well as product development. Although your major effort will be to support MVS products a knowledge of CICS or IMS, VM, TSO, SPX, etc., would be a distinct advantage, as would fluency in a second European language. Please quote Ref: 8033/CW.

PROGRAMMING TEAM LEADER - Berks to £13,500 + bonus

Due to the continuous increase in the demand for new systems, this household name company currently requires an experienced programming team leader. Based at modern headquarters, to the West of London, you will be leading a team working in an IBM environment using the most recent hardware and software releases. The applications cover manufacturing, sales, marketing and distribution and finance so a broad approach to programming is required. Please quote Ref: 8083/CW.

SNR (BUSINESS) ANALYSTS - Bucks/Herts Borders to £12,000

Our client is currently switching from mainframe systems to a distributed mini environment with full use of database. To ensure that they maintain their position in world markets (they currently export 80% of their product), they need Analysts to rework the sales order processing system, from on-line order entry, to despatch and invoicing. They currently need to improve on a same day cycle, so if you match the degree of excellence required, apply now. Quote Ref: 8137/CW.

SYSTEMS ANALYST - Bucks to £10,000

Aged 23-28? Two years' programming, at least one year in analysts?
If the answer is yes, then you could be looking at a very bright future with a major British group. Working in a continuous development environment, you will be part of a team enhancing major systems and there is considerable contact with users and other development teams. Experience of UNIVAC 1100, is preferred, but Analysts showing the required skills will be trained. Quote Ref: 8348/CW.

We also require the following permanent staff for other clients:

Datepoint Programmers/Analysts	to £11,000
Graduate Programmers Cobol IMS/DB/DC	to £9,500
French speaking Programmers Cobol IMS DB/DC	to £14,500
Analyst/Programmers ME29 Cobol TME	to £11,000
Burroughs Cobol Programmers Medium/Large Systems	to £10,500
Cobol Team Leader	to £13,000
Tech Support (Burroughs)	

Please contact DAVID at KPG or on 01-747 0969 during the week or at weekends.

SALES TRAINING, MARKET RESEARCH, RECRUITMENT

SALES EXECUTIVES MANUFACTURING SYSTEMS EAST MIDLANDS & LONDON

If you are currently involved with manufacturing systems, you will be very much aware of our client's outstanding product; a real market leader in mini-computer based manufacturing systems.

If you want to increase both the quality of the product you are selling, as well as your career prospects, this is an ideal opportunity. This of course, is based on the assumption that you already have experience of selling manufacturing related products.

Contact Alasdair Scott in London, or Roger Dodd in the Midlands, quoting reference DSG/073.

SOUTH REGIONAL SALES MANAGER £30,000

If you are an experienced and successful sales manager with some knowledge of data communications equipment, this could be the best job opportunity you have had in a long time. Based in the Home Counties, our client will already be well known to those applicants already in the communications business as an outstanding, successful, enthusiastic and happy company.

Please contact Alasdair Scott in London, quoting reference SMC/073.

SALES EXECUTIVES EDINBURGH/ ABERDEEN

We can assure you that whatever assumptions you make about these two jobs based on the following features/benefits, will be an understatement of their real potential.

- ★ Latest product announcements at least a year ahead of competition.
- ★ Over 25 new product announcements at least a year.
- ★ Most of current management graduated from within the company.
- ★ Vacancies result from expansion.
- ★ We are talking about actual earnings, not make-believe, when we talk about

£25,000 + Company Car

If you are an accomplished computer industry salesman residing in Scotland, please call Roger Dodd in Lichfield quoting reference DSE/073.

SALES BIT

Quality of management - 61

A salesman's knowledge has to be diverse

I KNOW it may be a considerable shock to many readers, but my long promised book has been published. It is called *All About Selling* and is published by McGraw Hill, price £8.95.

It has been a long time coming - about three elapsed years in all - but I made it eventually.

Its appearance has caused me to reflect on a few things related to my literary efforts on the selling topic.

When a previous editor of *Computer Weekly*, Malcolm Pefu, originally agreed to publish the *Sales Bit* it was intended to be an occasional single column with an initial commitment of six, followed by the agreement that with a bit of luck I could soldier on for about a year. That was September 1978!

Here I am five years later, still churning two columns a week and

partitions tend to be predictable, governed by clearly parameterised job functions. There are clear standards of protocol within a clearly defined industry or profession.

Selling embraces all people, all industries, all products and every shade of objective or subjective behaviour. It is a minefield of problems and opportunities, in which survival is absolutely dependent on the applications knowledge and many essential human characteristics, such as sensitivity, perception and creativity.

I therefore find it quite astonishing that in this day and age selling is to many a profession with less social standing than that of the accountant, the lawyer, the doctor and so on.

Within many companies the salesman is still a "necessary evil", a fast talking trickster who may

Selling embraces all people, all industries, all products and every shade of objective or subjective behaviour. It is a minefield of problems and opportunities, in which survival depends on applications knowledge

hoping there are still a few of you out there managing to stay the course.

Writing a book is a bit like having a baby. At first it is all promise and excitement, unable to wait for the "big day", but having to. As time goes on the promise and excitement give way to discomfort and anxiety and, as the final months draw near, the greatest emotion is to get it over with and be rid of the stress of it all.

Suddenly, just when you're thinking it will never arrive, it appears, almost taking you by surprise. There it is, the fruit of your labour held in your hands.

It may be ugly, but it's all yours.

Of course, publishers and colleagues, friends and neighbours tell you whatever it is they believe an author wants to hear. What he really needs to hear is the truth, however, which may be something else.

So, it will please me considerably if any readers of my book will do me the favour of letting me have their reactions, so that I can get a feel of what the world really thinks.

earn lots of money but belongs way down the social scale.

Let's get this right: salespeople are special!

Sure, there are plenty of people working in a selling role within the computer industry who should never be in the job, but they should not be allowed to influence our judgment of the kind of performance and achievement we should expect of a truly professional salesman.

I guess it is rather self-patronising to quote from one's own book, but I will. "Selling is the purveyor of the new, despite the suspicion and protestations of those who are secure in the comfort of the old. It is a positive agent for change, innovation and new ideas; a key factor in the expansion of a progressive society."

Selling is a bridge between the maker and the user; it is the justification and outlet for the product of a business enterprise in its ability to persuade potential customers to try, buy and use.

"Selling is the process on which the health, growth and survival of a commercial business ultimately

For those new to selling it must be clearly understood that, without the basic skills and disciplines of the profession, true and continuing success will never be achieved

Flipping through the contents page of the book I was reminded of the broad dimensions and complexities of selling as a professional occupation.

I am not referring to the typical old fashioned "company representative", but to the fully trained, accomplished salesman with a broad spectrum of industry and application experience, calling on a wide range of basic selling skills: product and applications knowledge; identifying new business opportunities; territory management; interpersonal communications; controlling the sales negotiations; overcoming sales resistance; closing the sale; handling political situations; and understanding business finance.

There are but a few of the areas in which the salesman must gain complete understanding and fluency of action.

As far as I can see, the diversity of knowledge, action and discipline required is far greater than for most other professions. Most occu-

depends. It is the sustaining force of a free enterprise.

"To describe it merely as a transfer of goods, services or ideas from one party to another in exchange for money is a serious understatement."

Of course, all this assumes that the salesman is constantly striving to advance and sustain his professional skills, no less so than if he were an engineer, a scientist, a teacher or an accountant.

For those new to selling it must be clearly understood that, without the basic skills and disciplines of the profession, true and continuing success won't be achieved.

Alan Williams

PUZZLE ANSWER

THE two arrangements giving the largest possible some product (58,560) are 64 x 915 and 80 x 732.

58560
64 x 915
80 x 732
